

Patterns That Hold

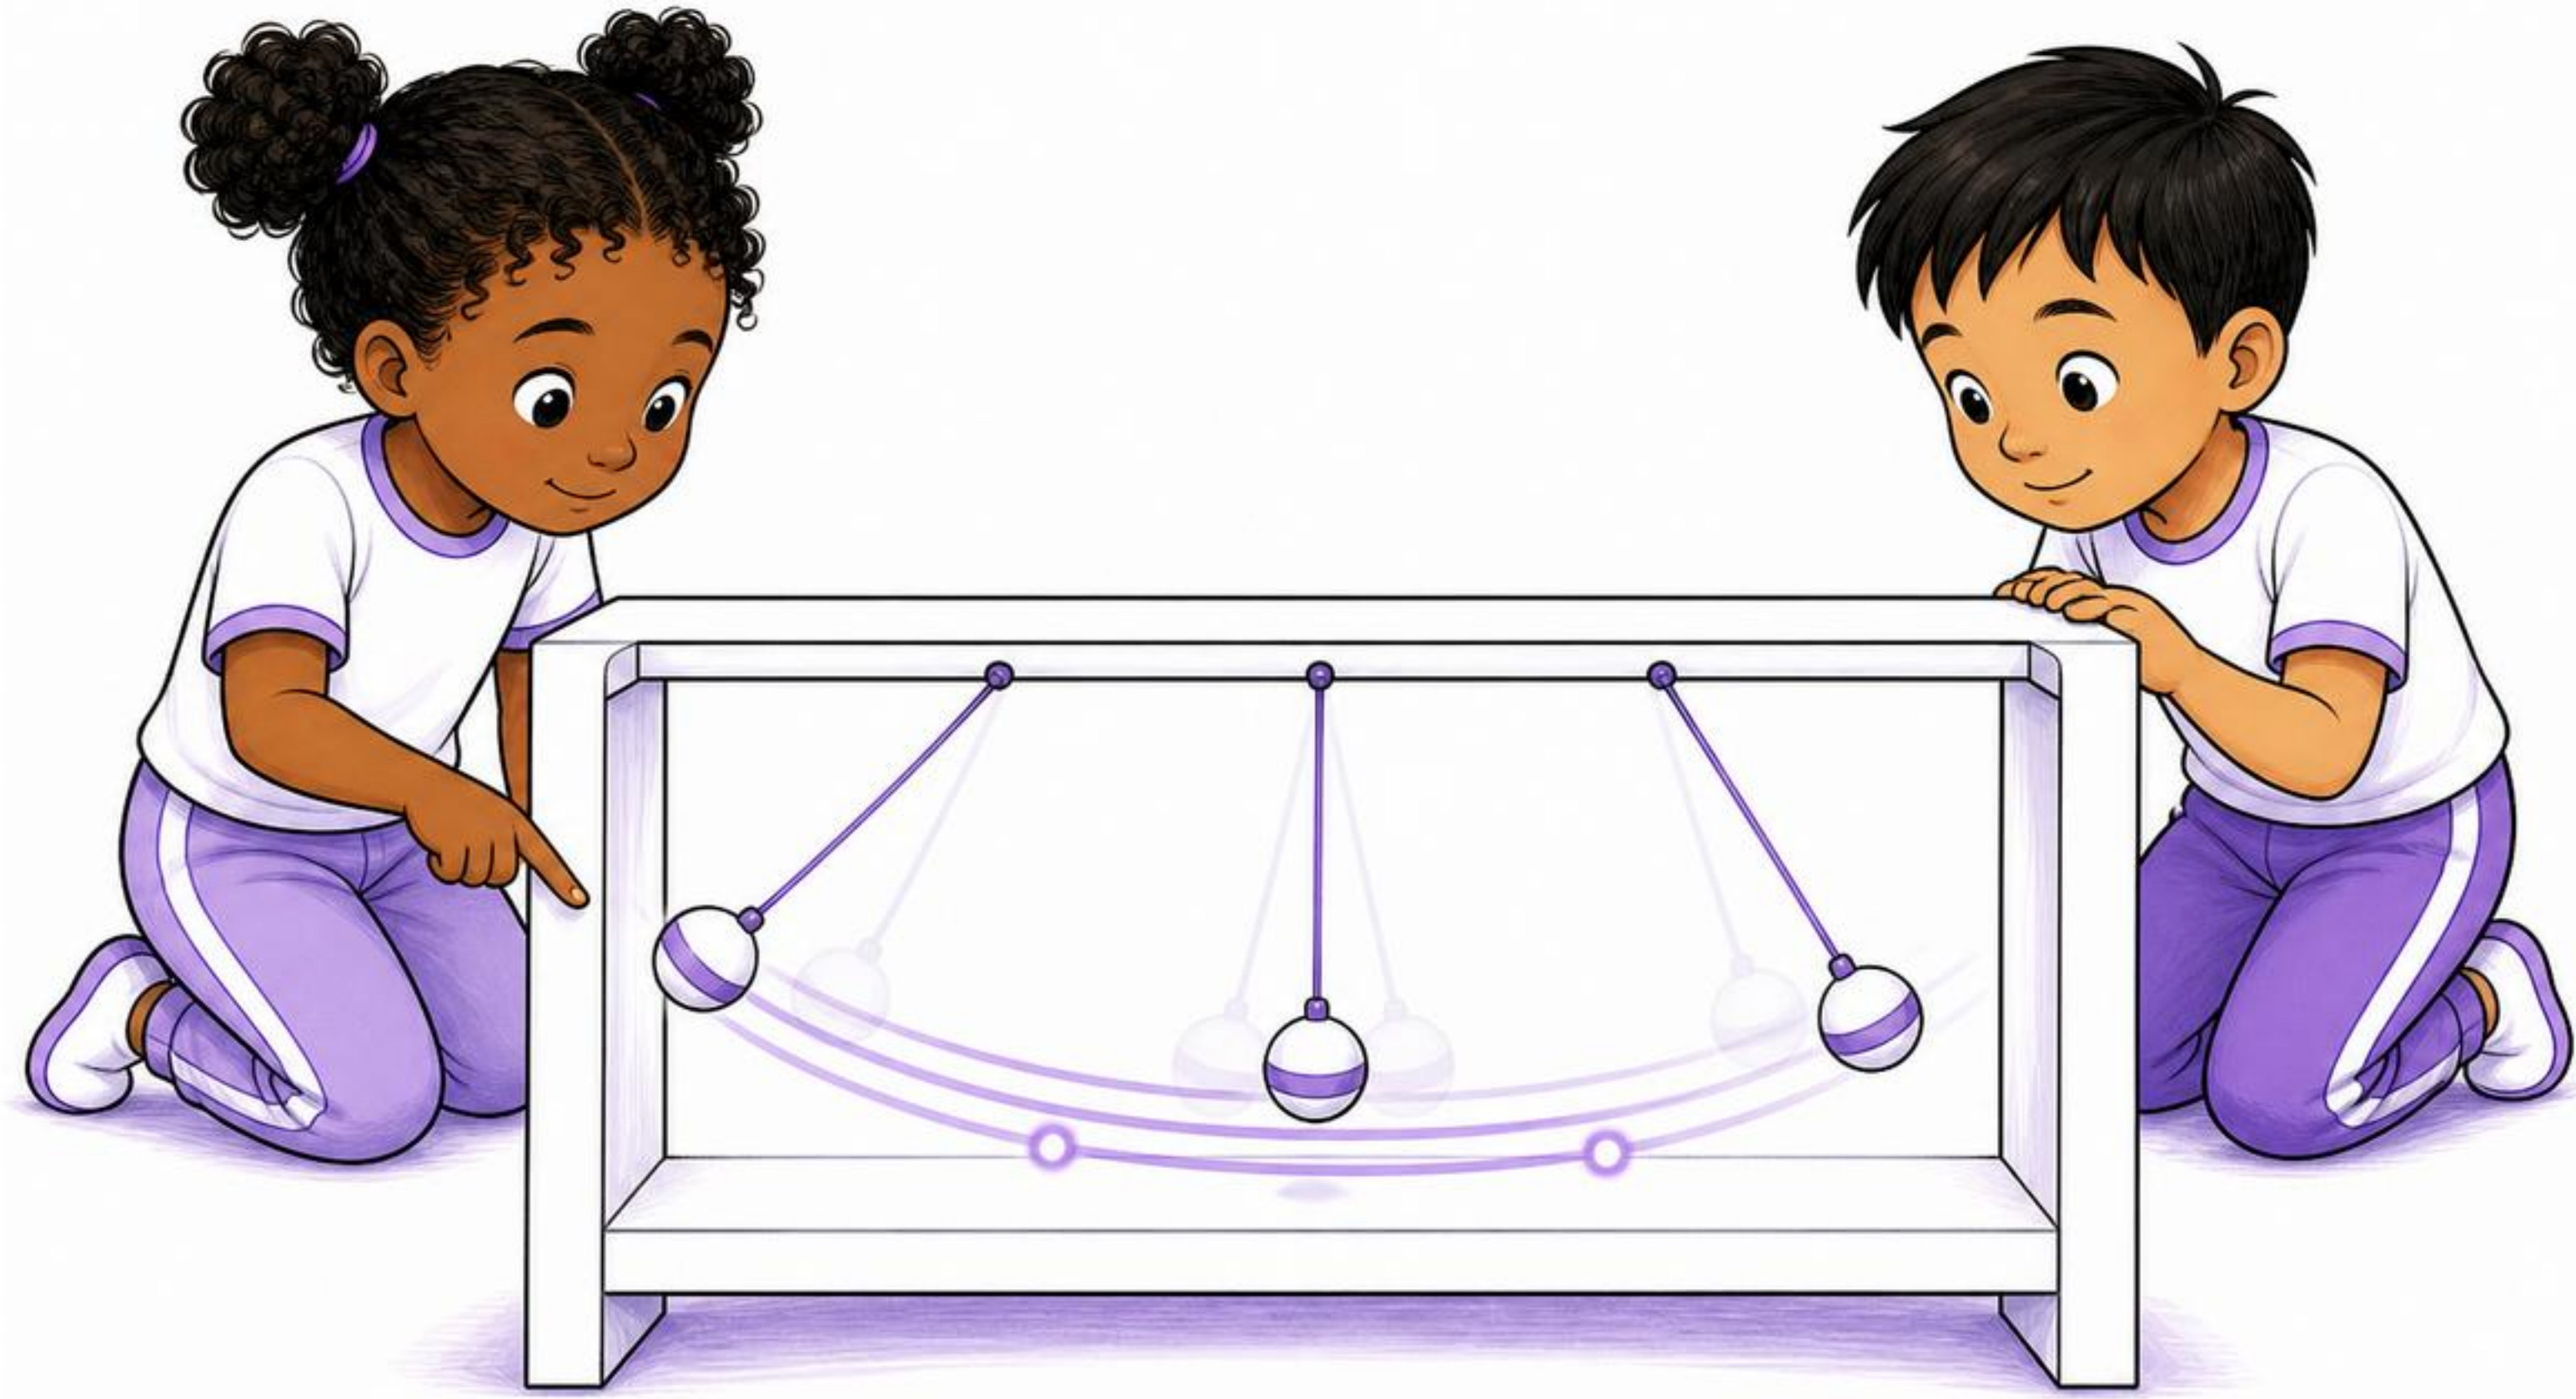

Electra set three beads on strings.
Poz gave one bead a gentle push.

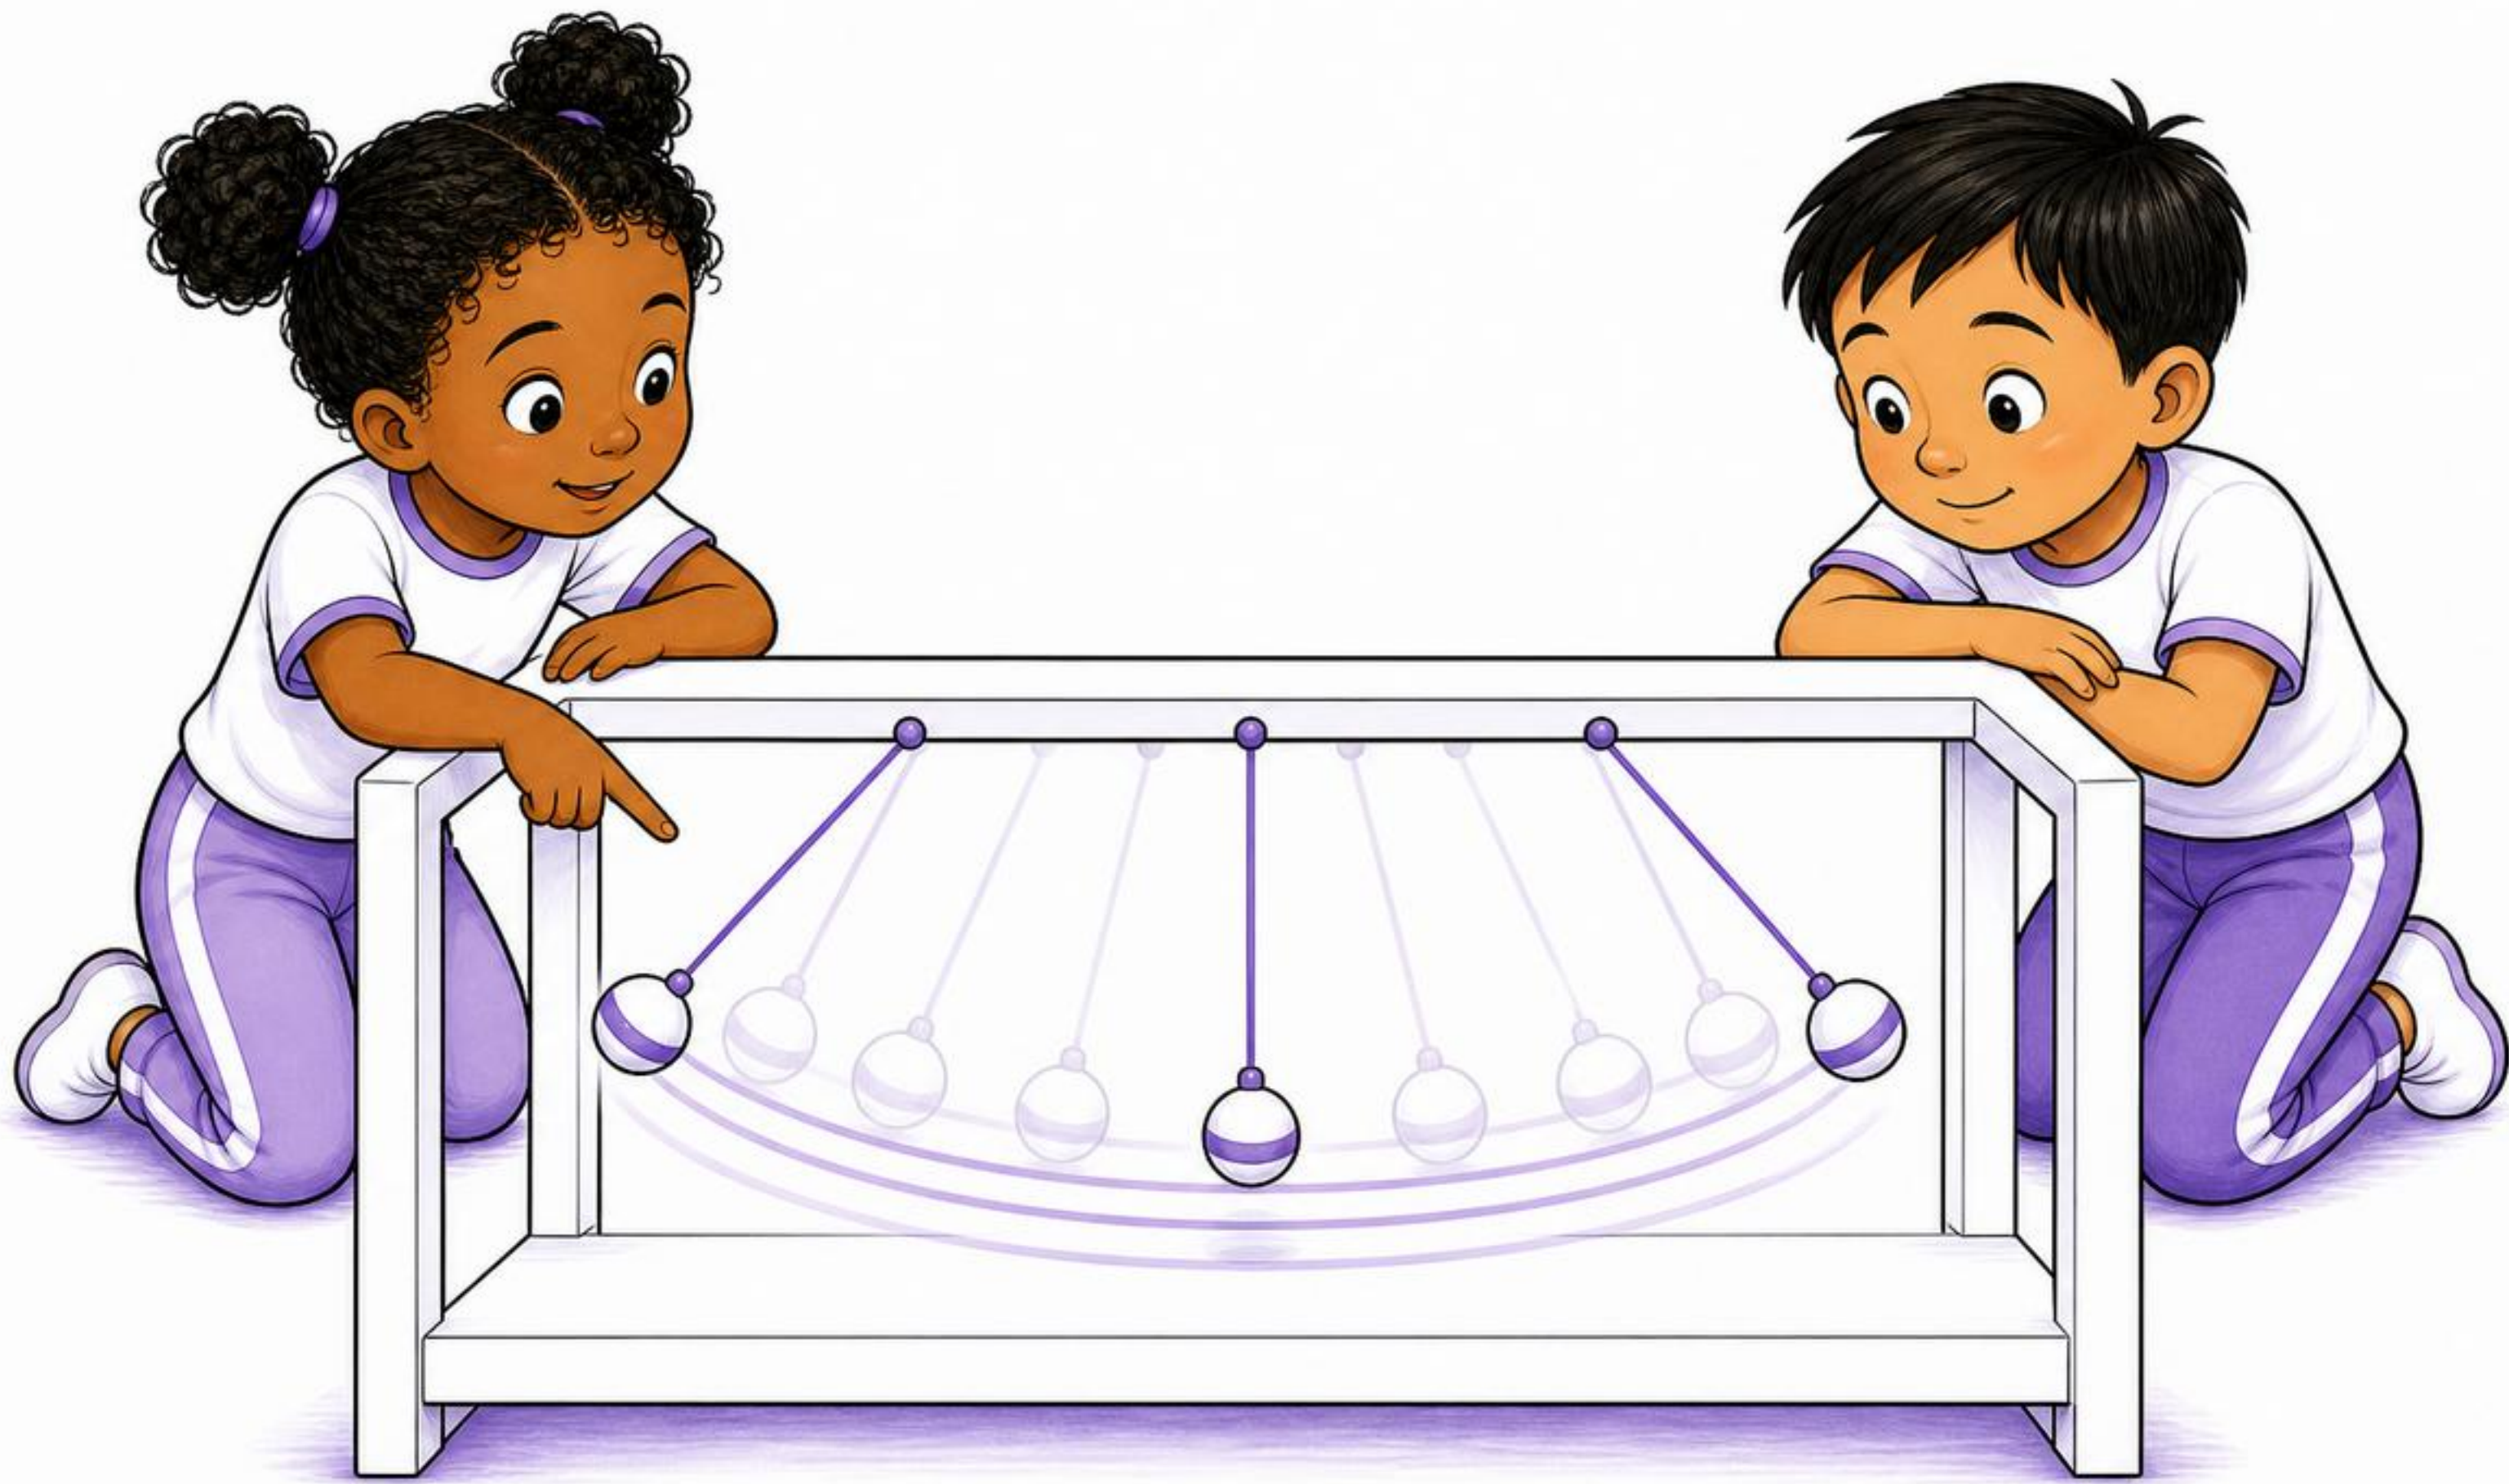

One bead swung too far.
The pattern broke apart.

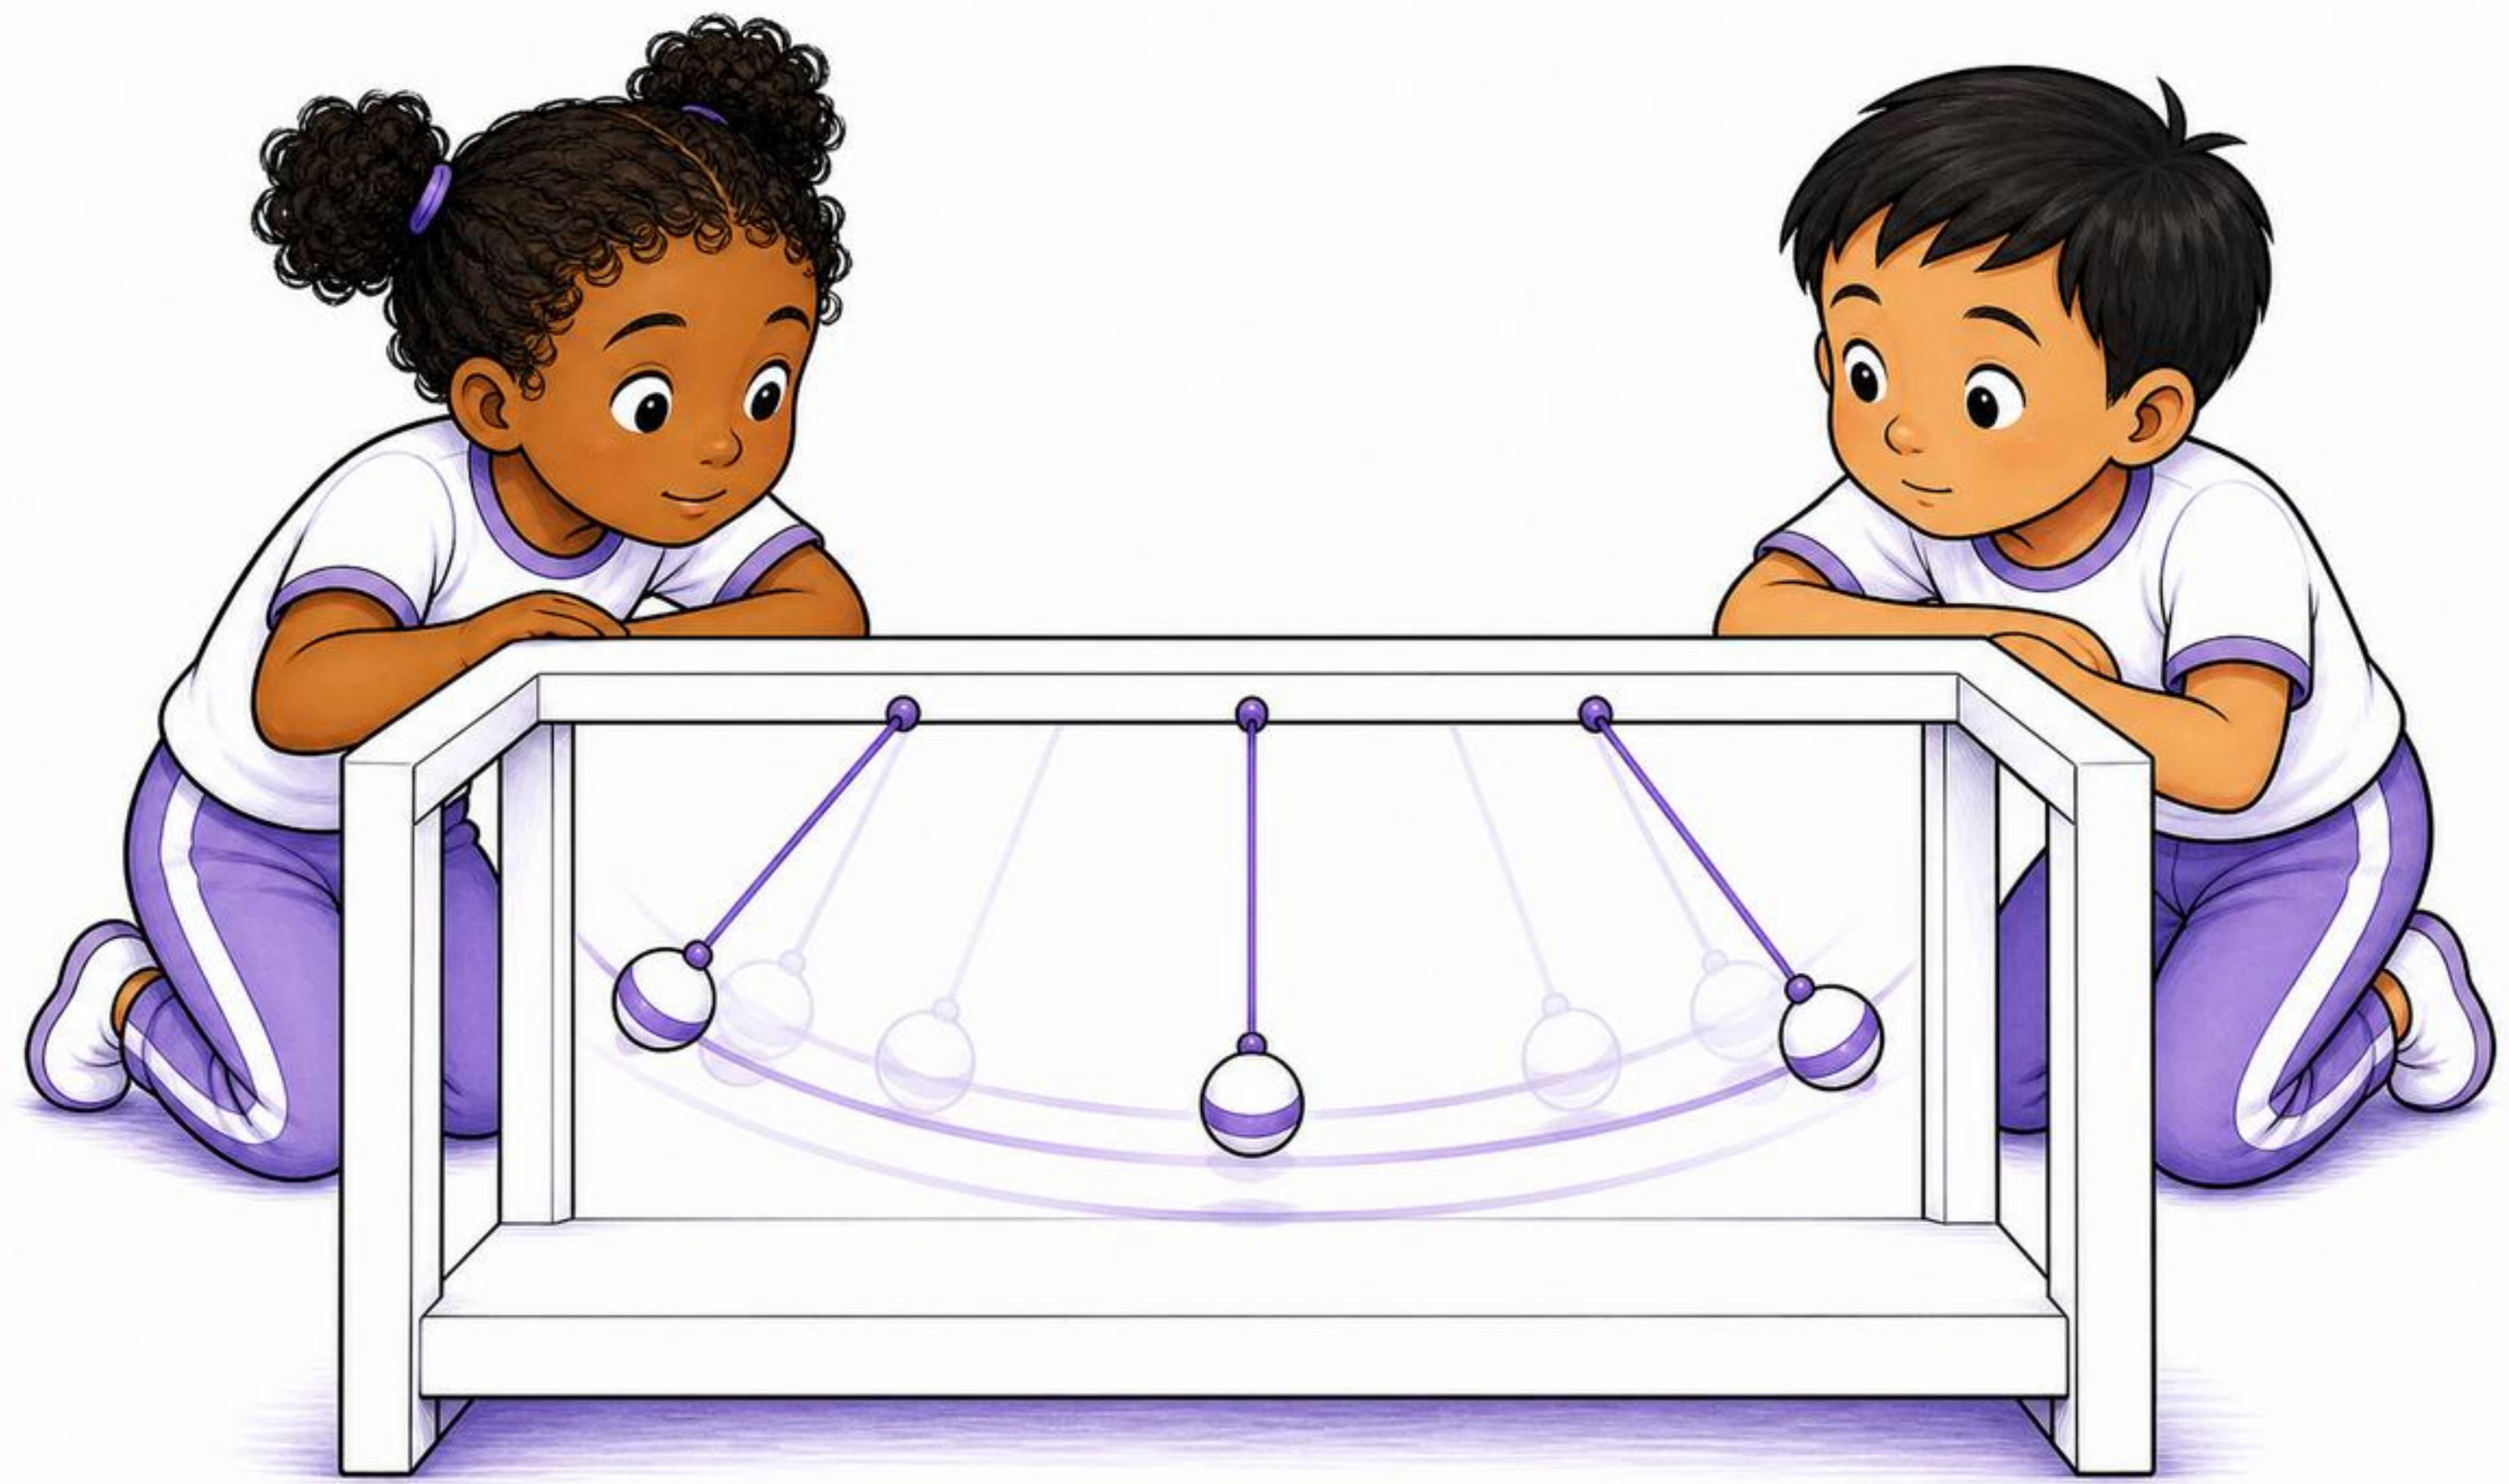

One bead barely moved.
Nothing interesting lasted.

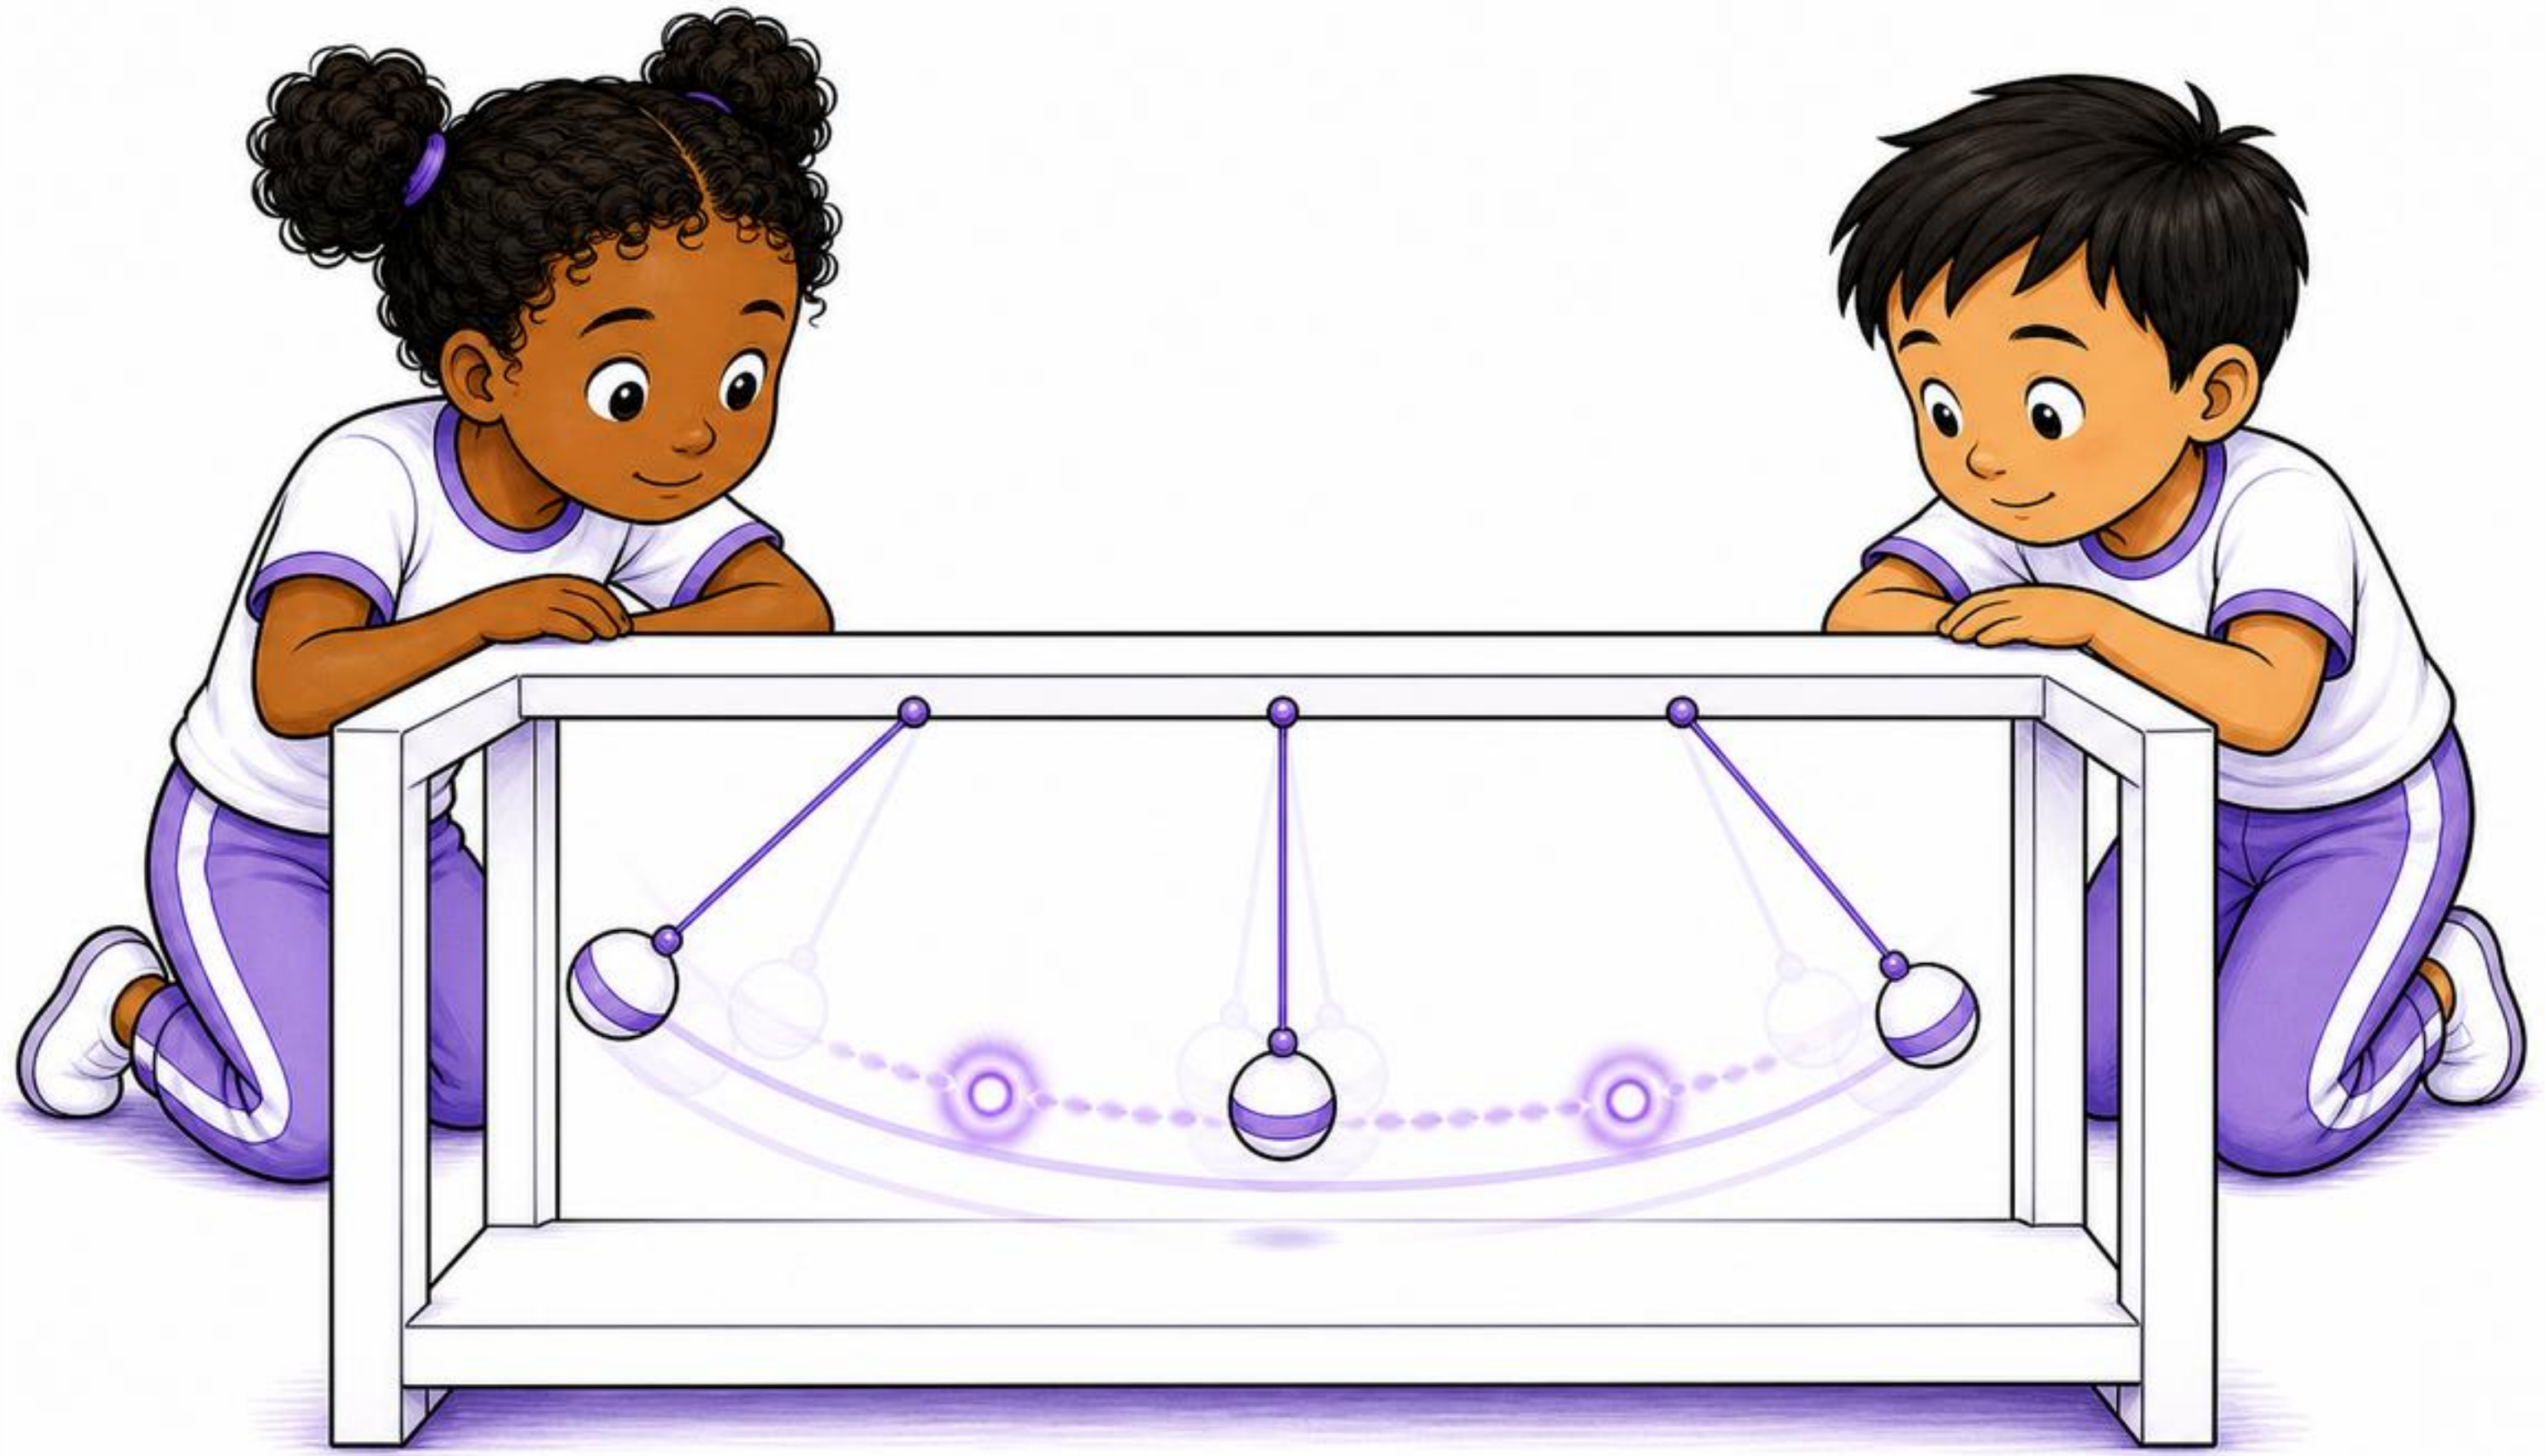

Electra tried a smaller push.
The beads moved.
Then moved again together.

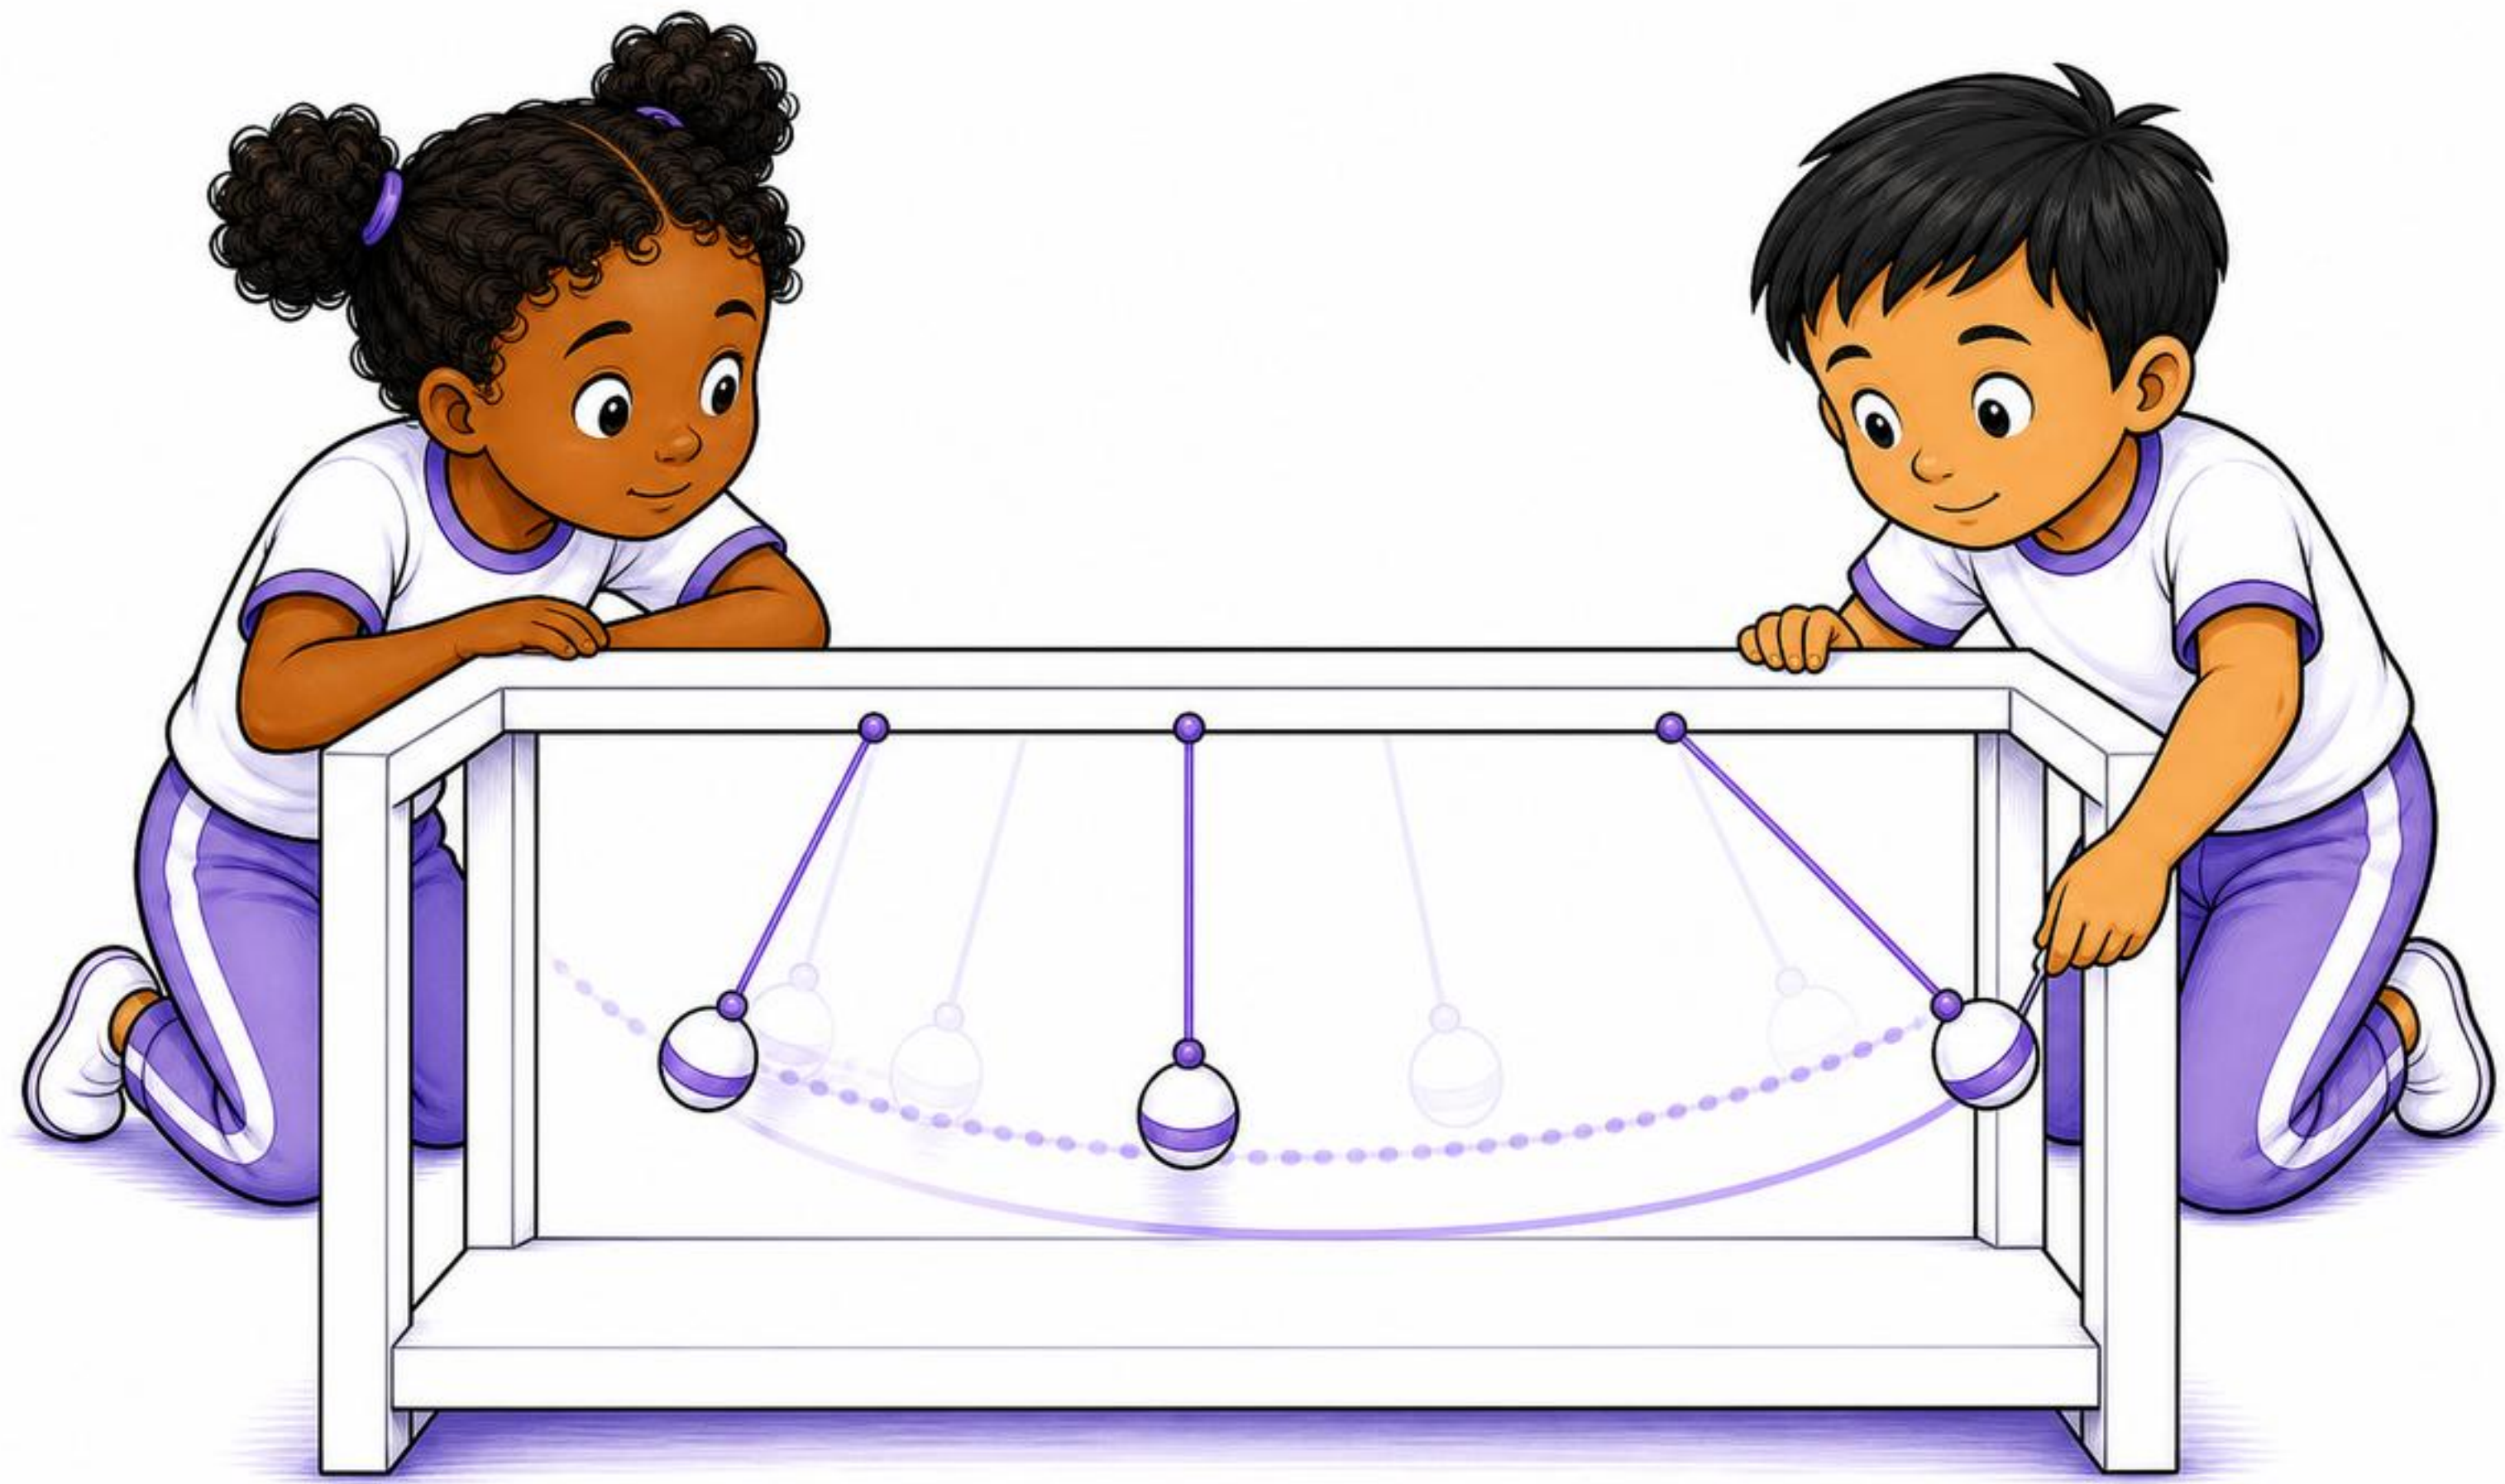

Left.
Right.
Left.
The pattern came back.

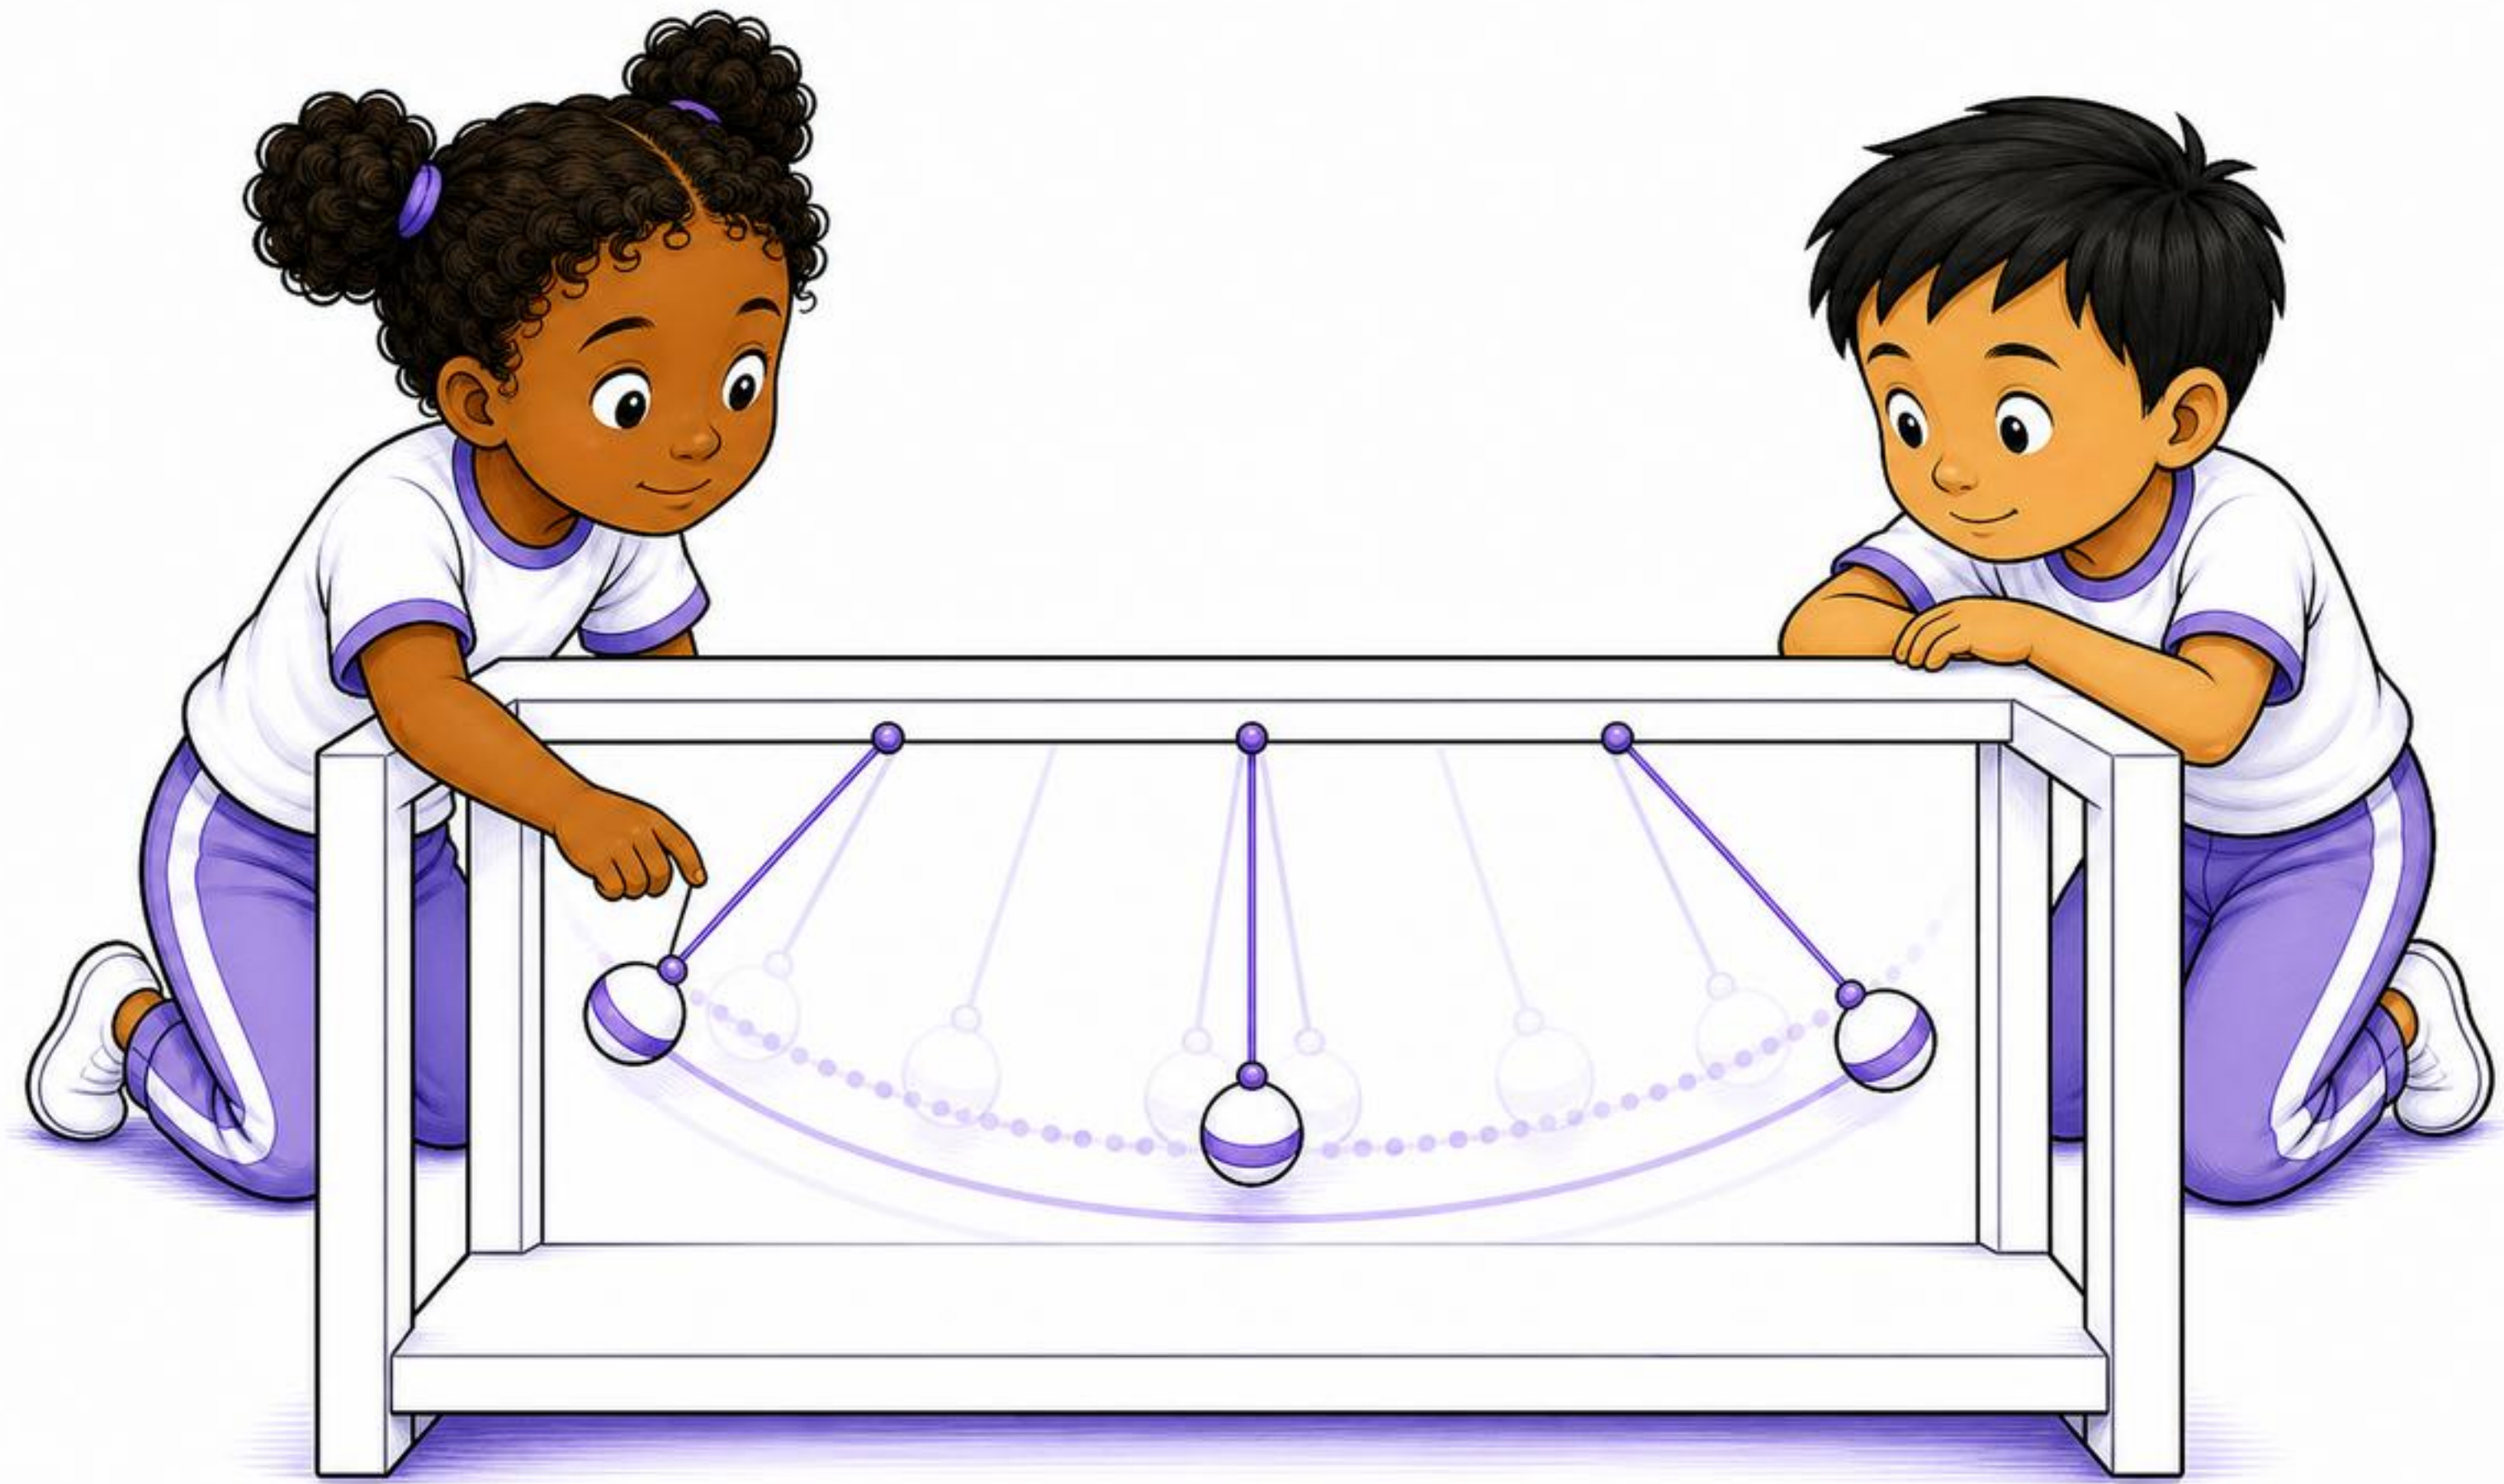

"It is holding,"
Poz said.
"But nothing is frozen."

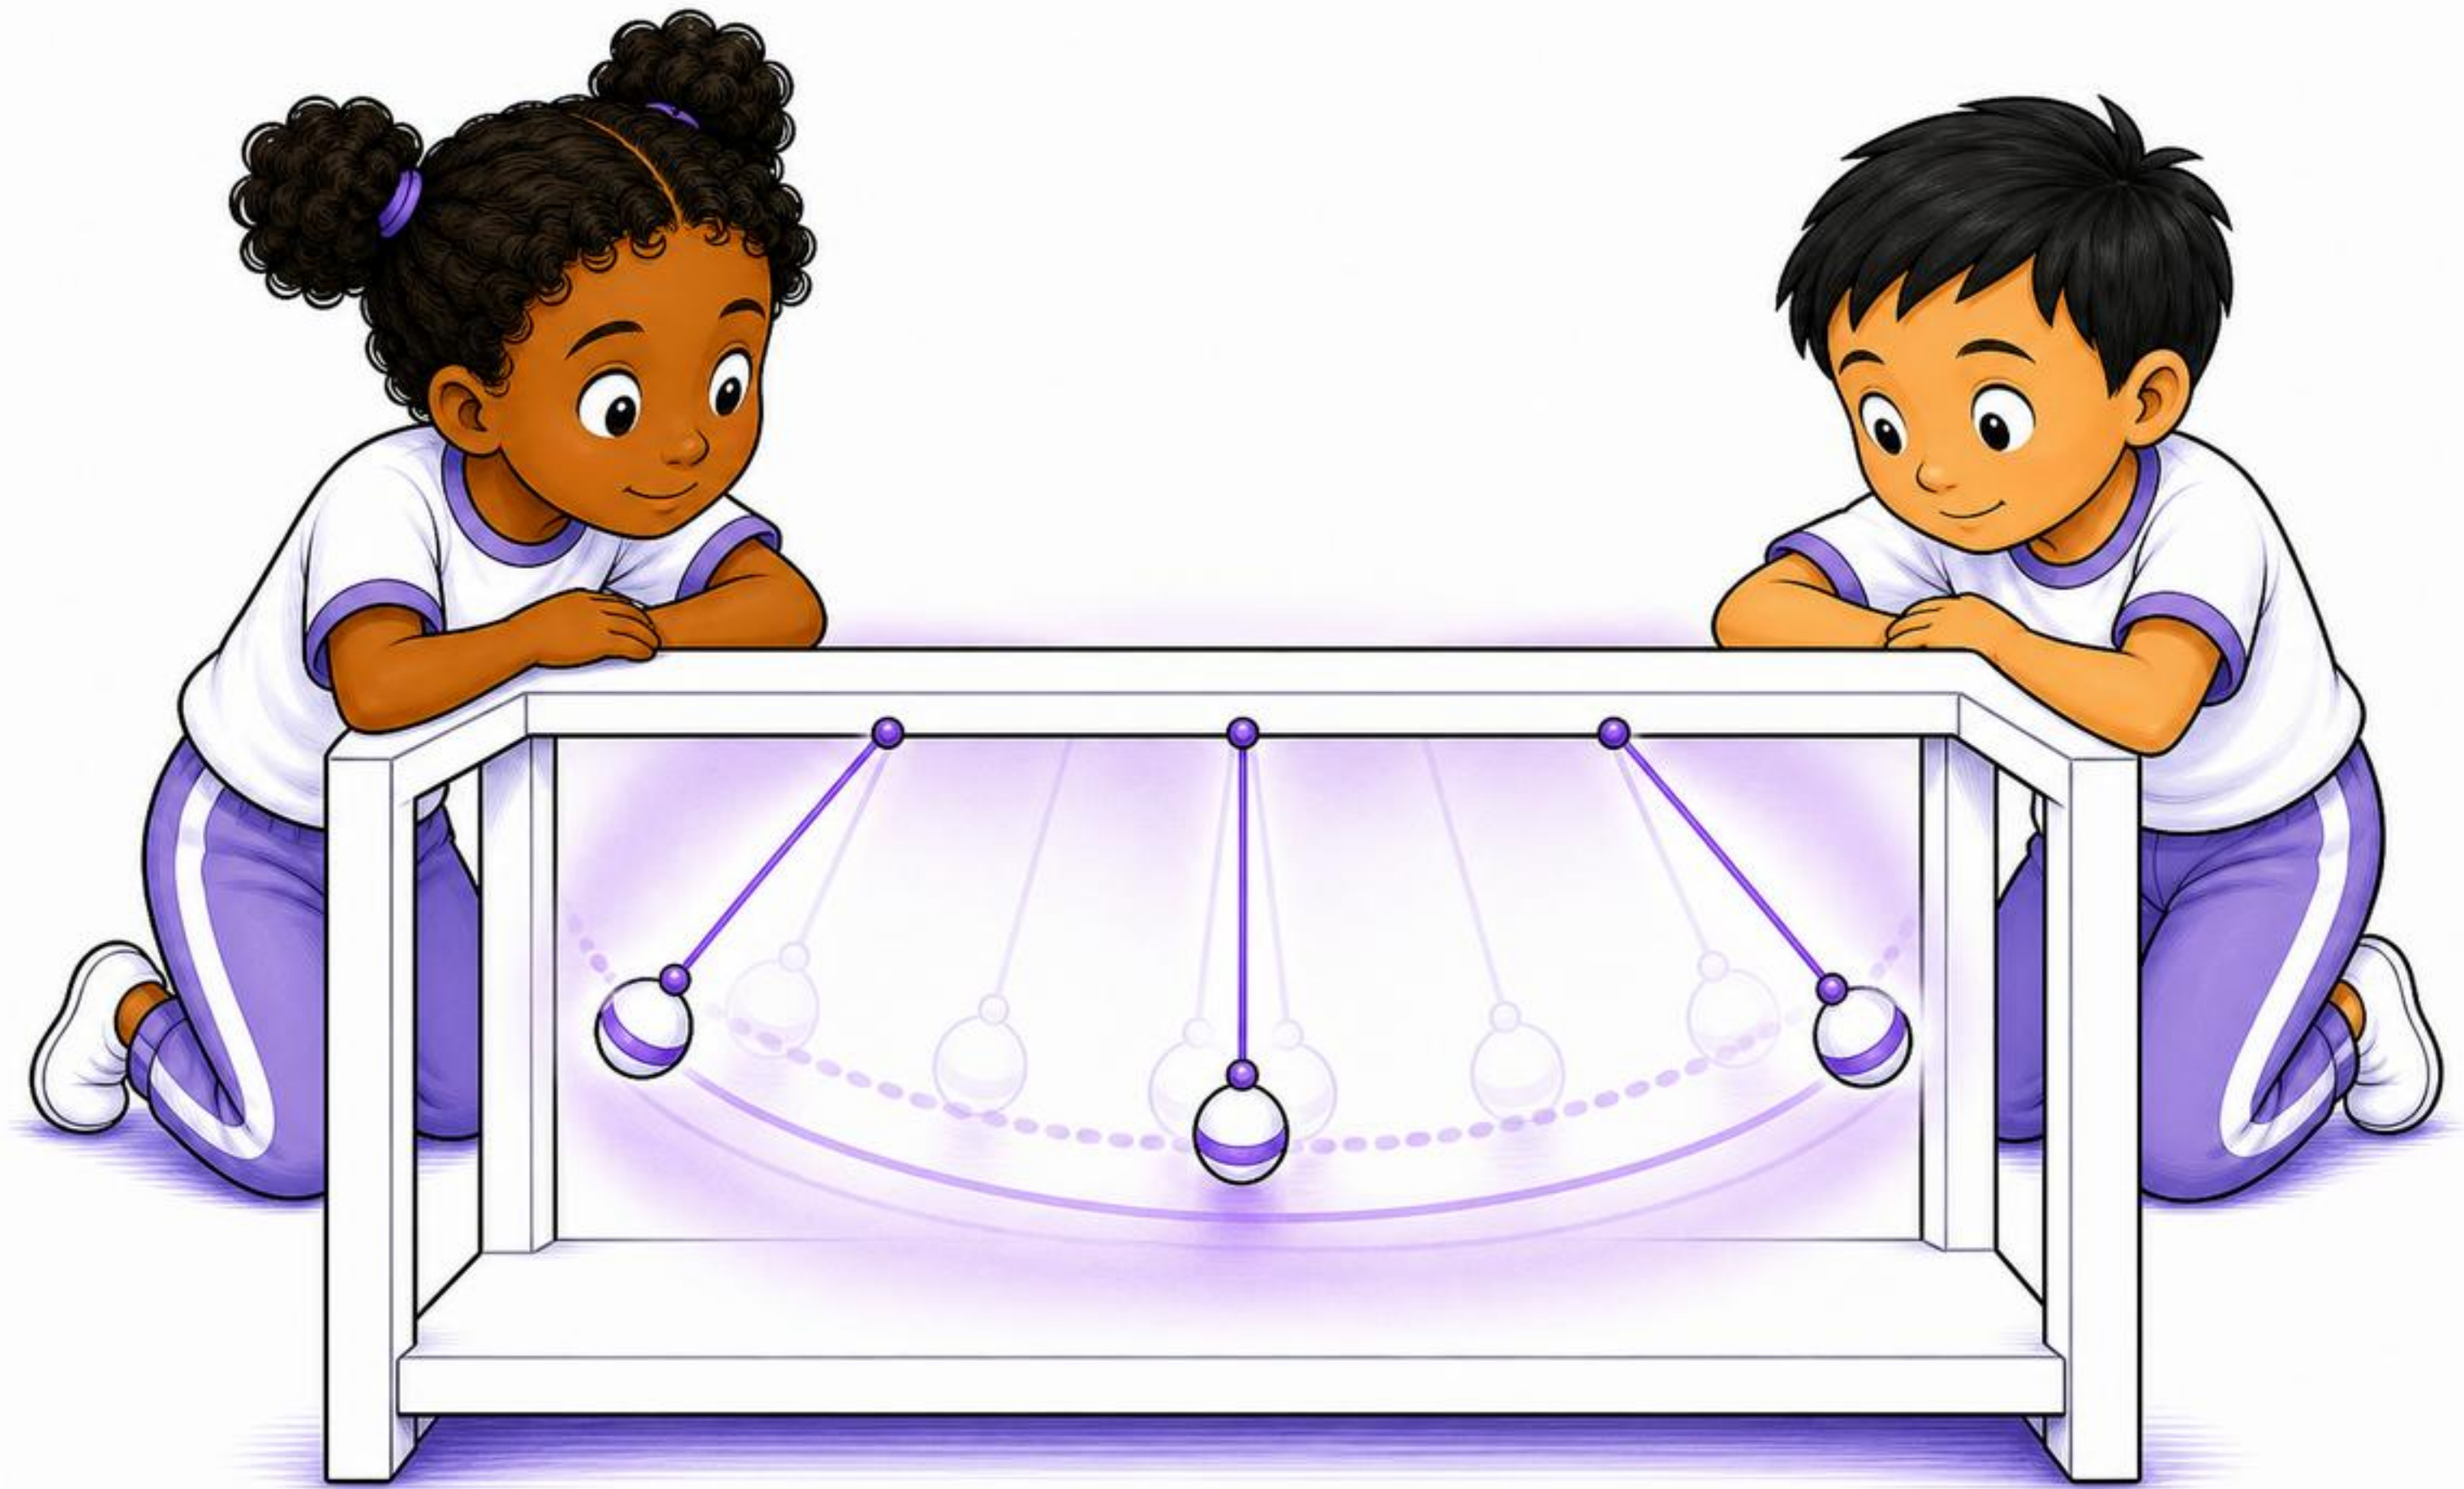

Each bead pulled on another.
Each answer came at the right time.

Poz moved one bead farther away.
The old rhythm faded.

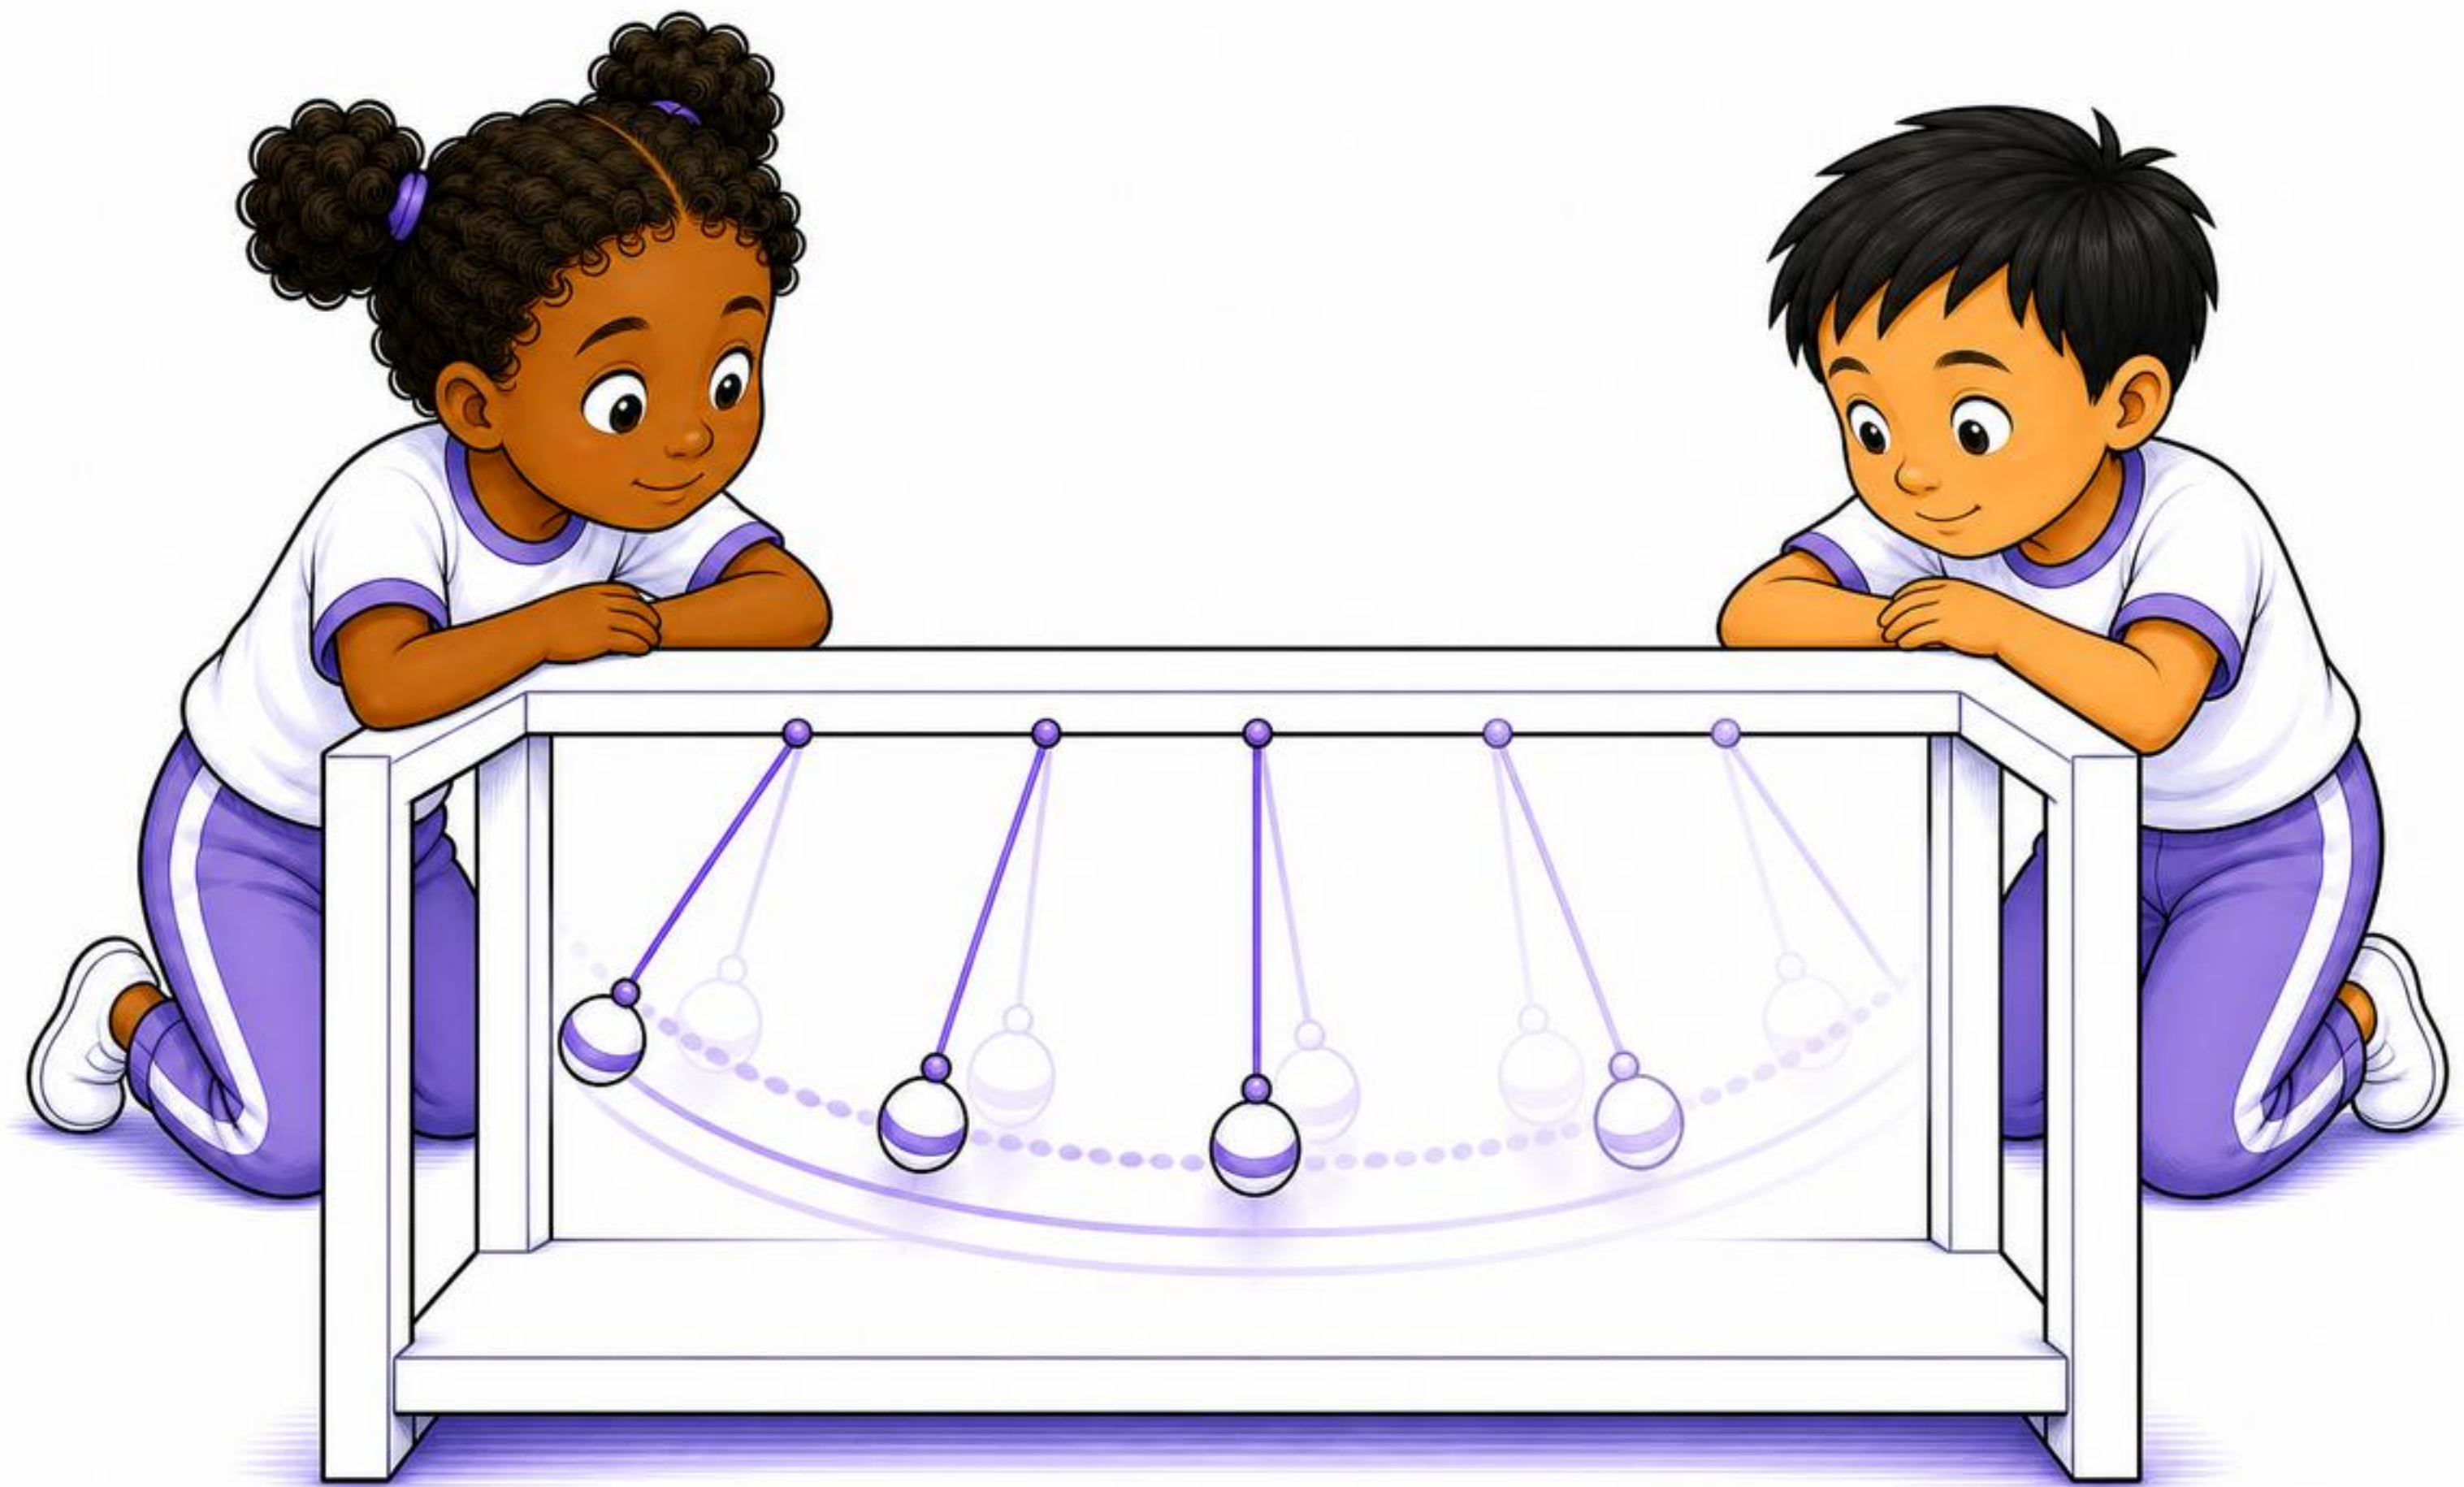

Electra moved it back.
The rhythm returned.

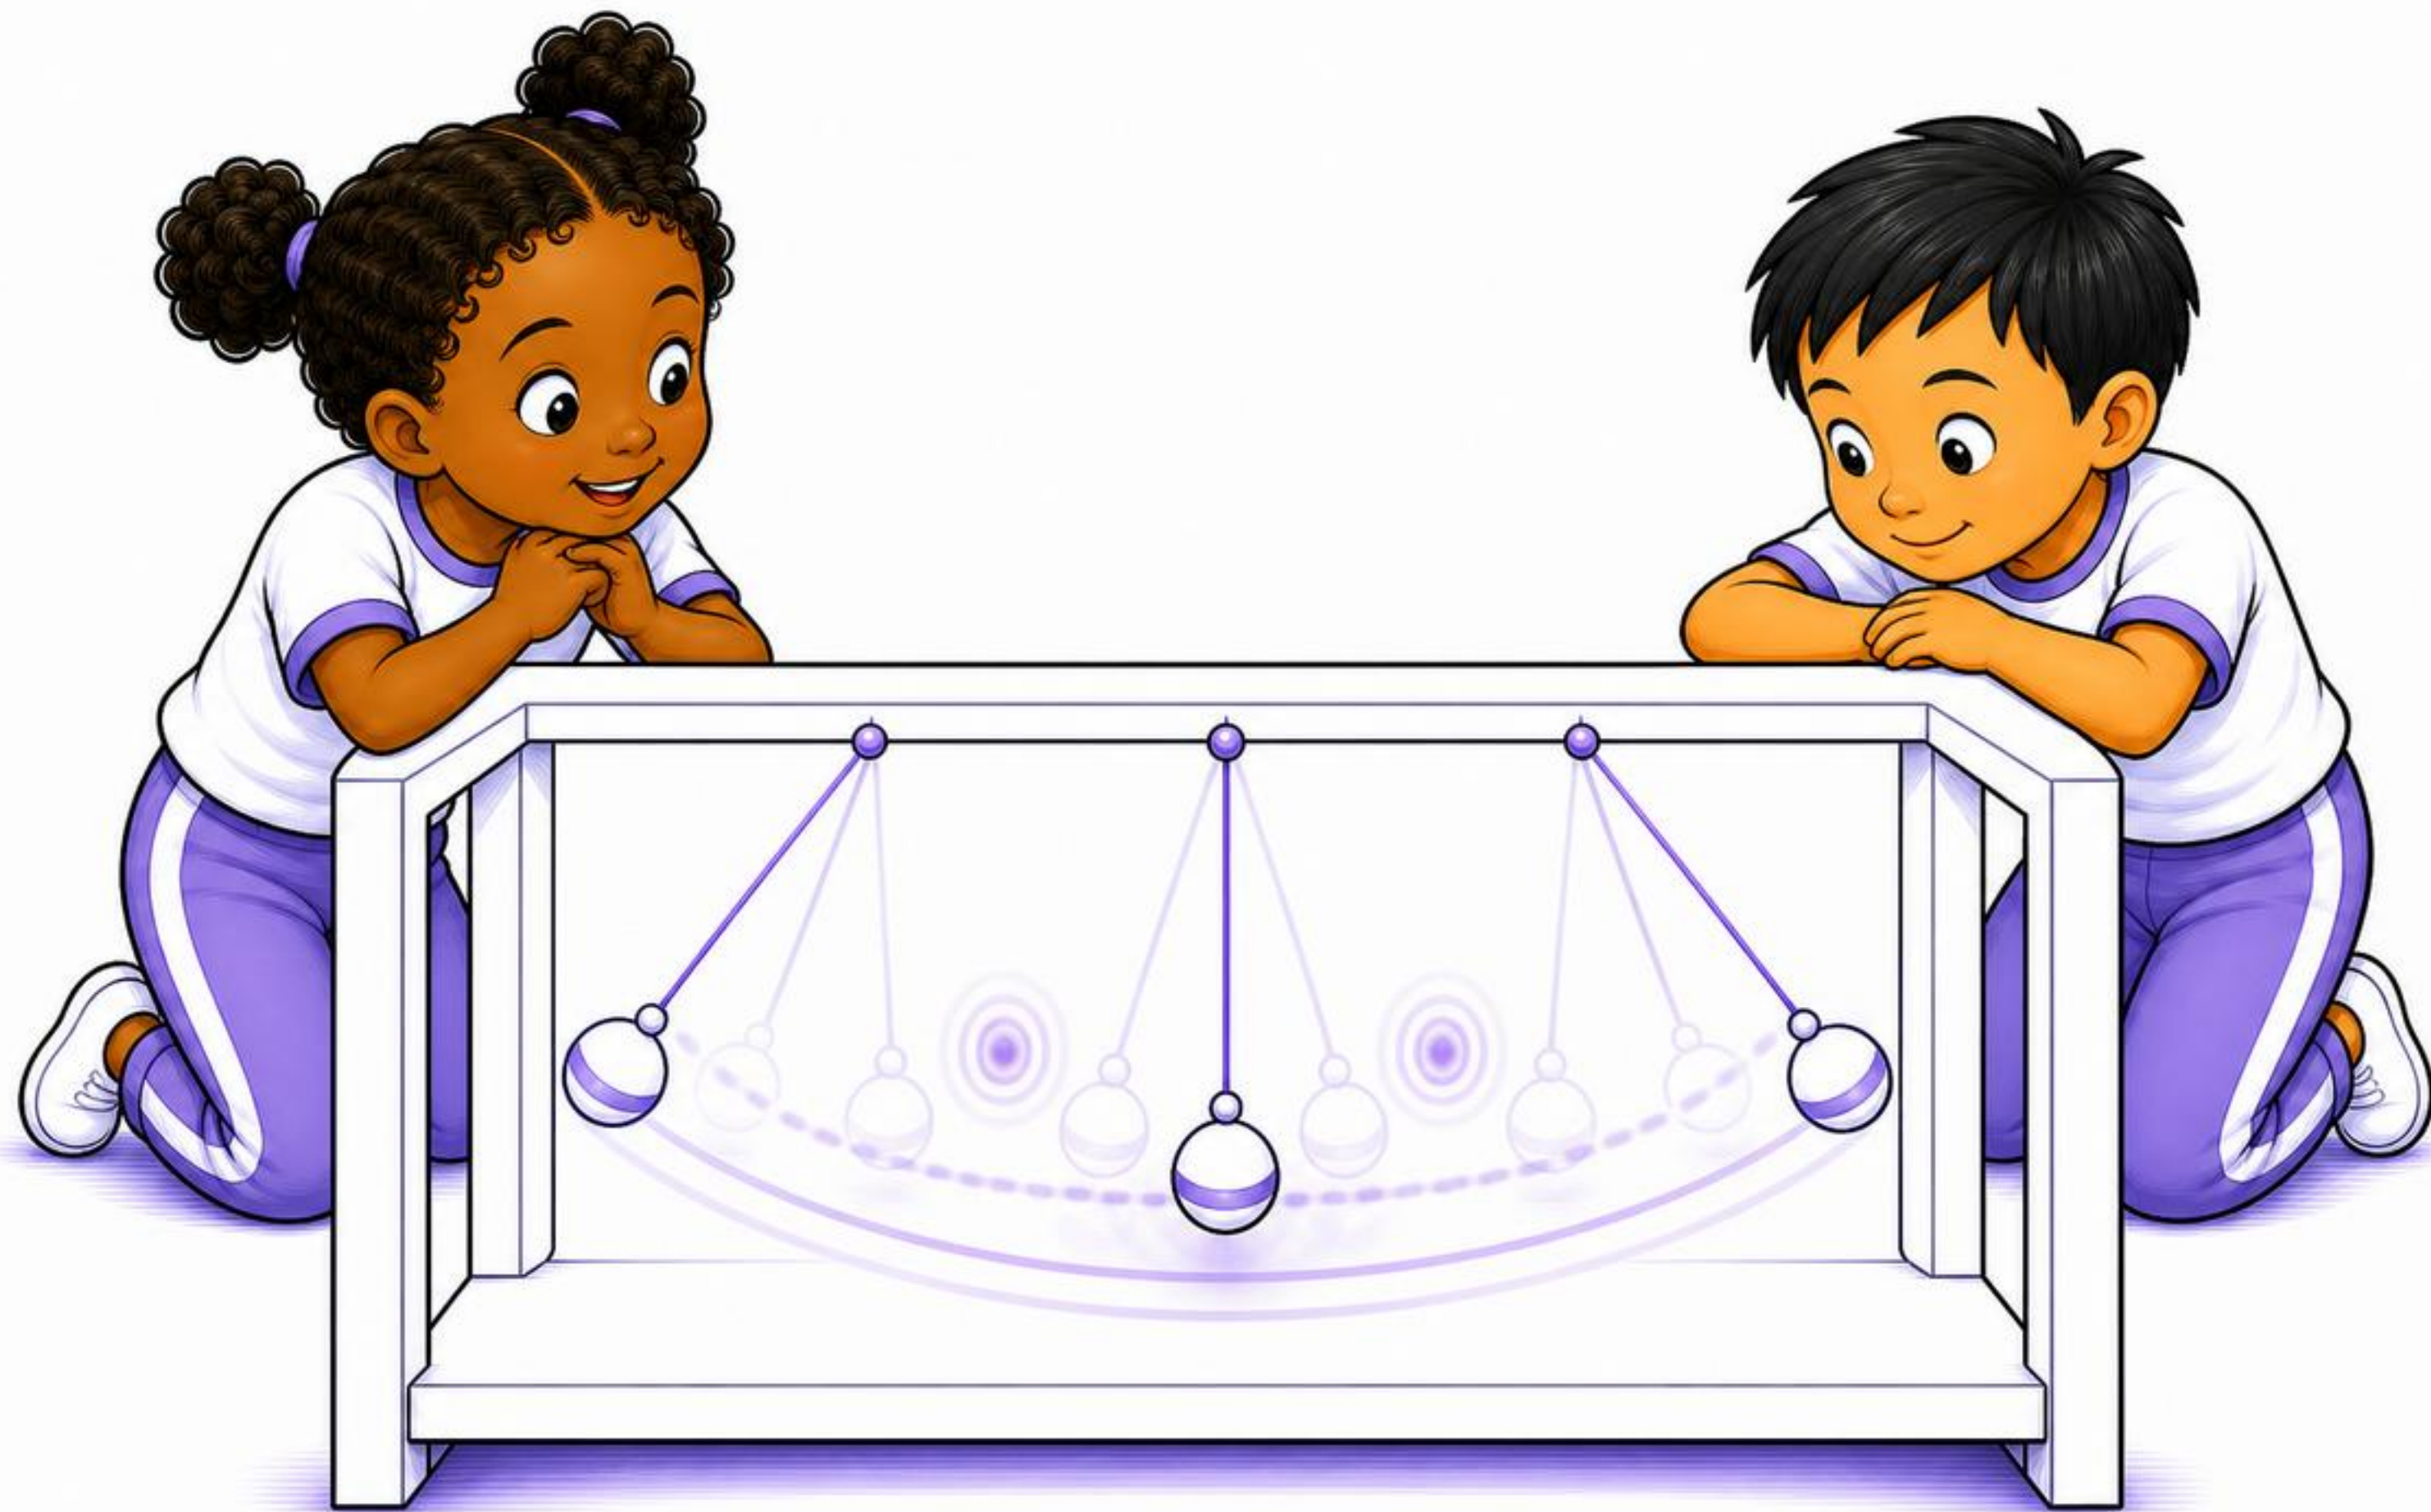

Electra watched.

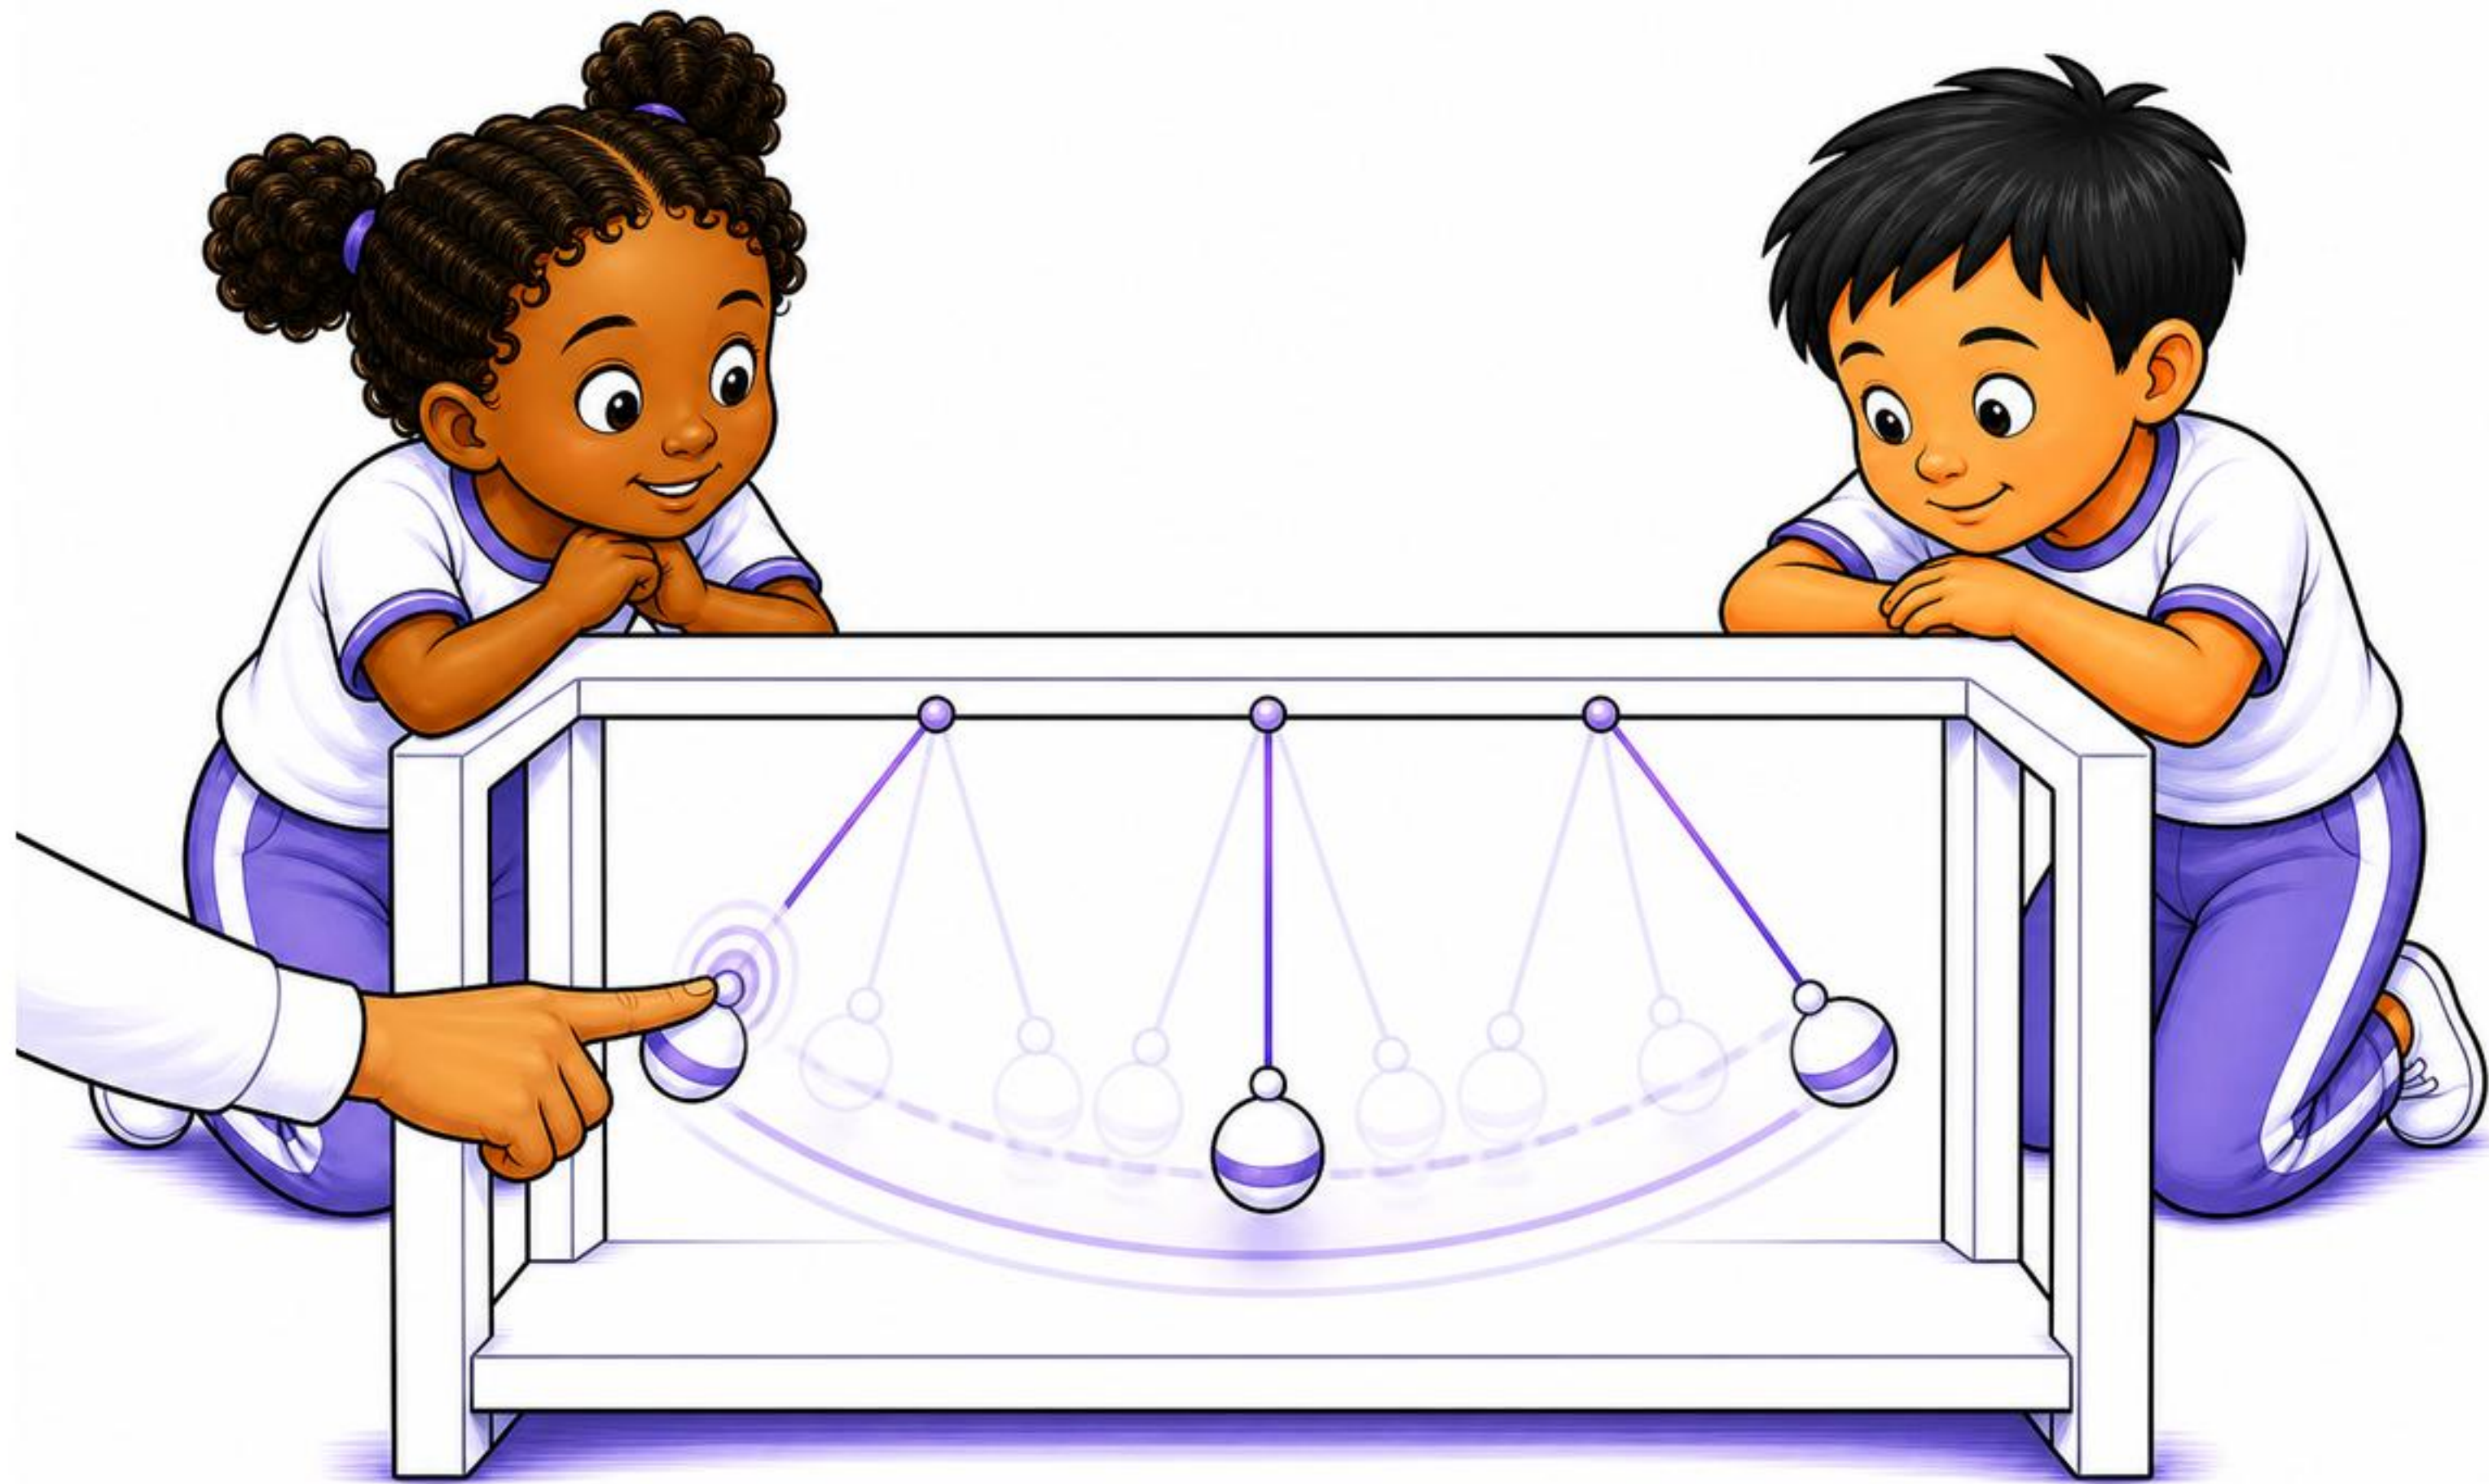

"Later, we can call this kind of holding an assembly."

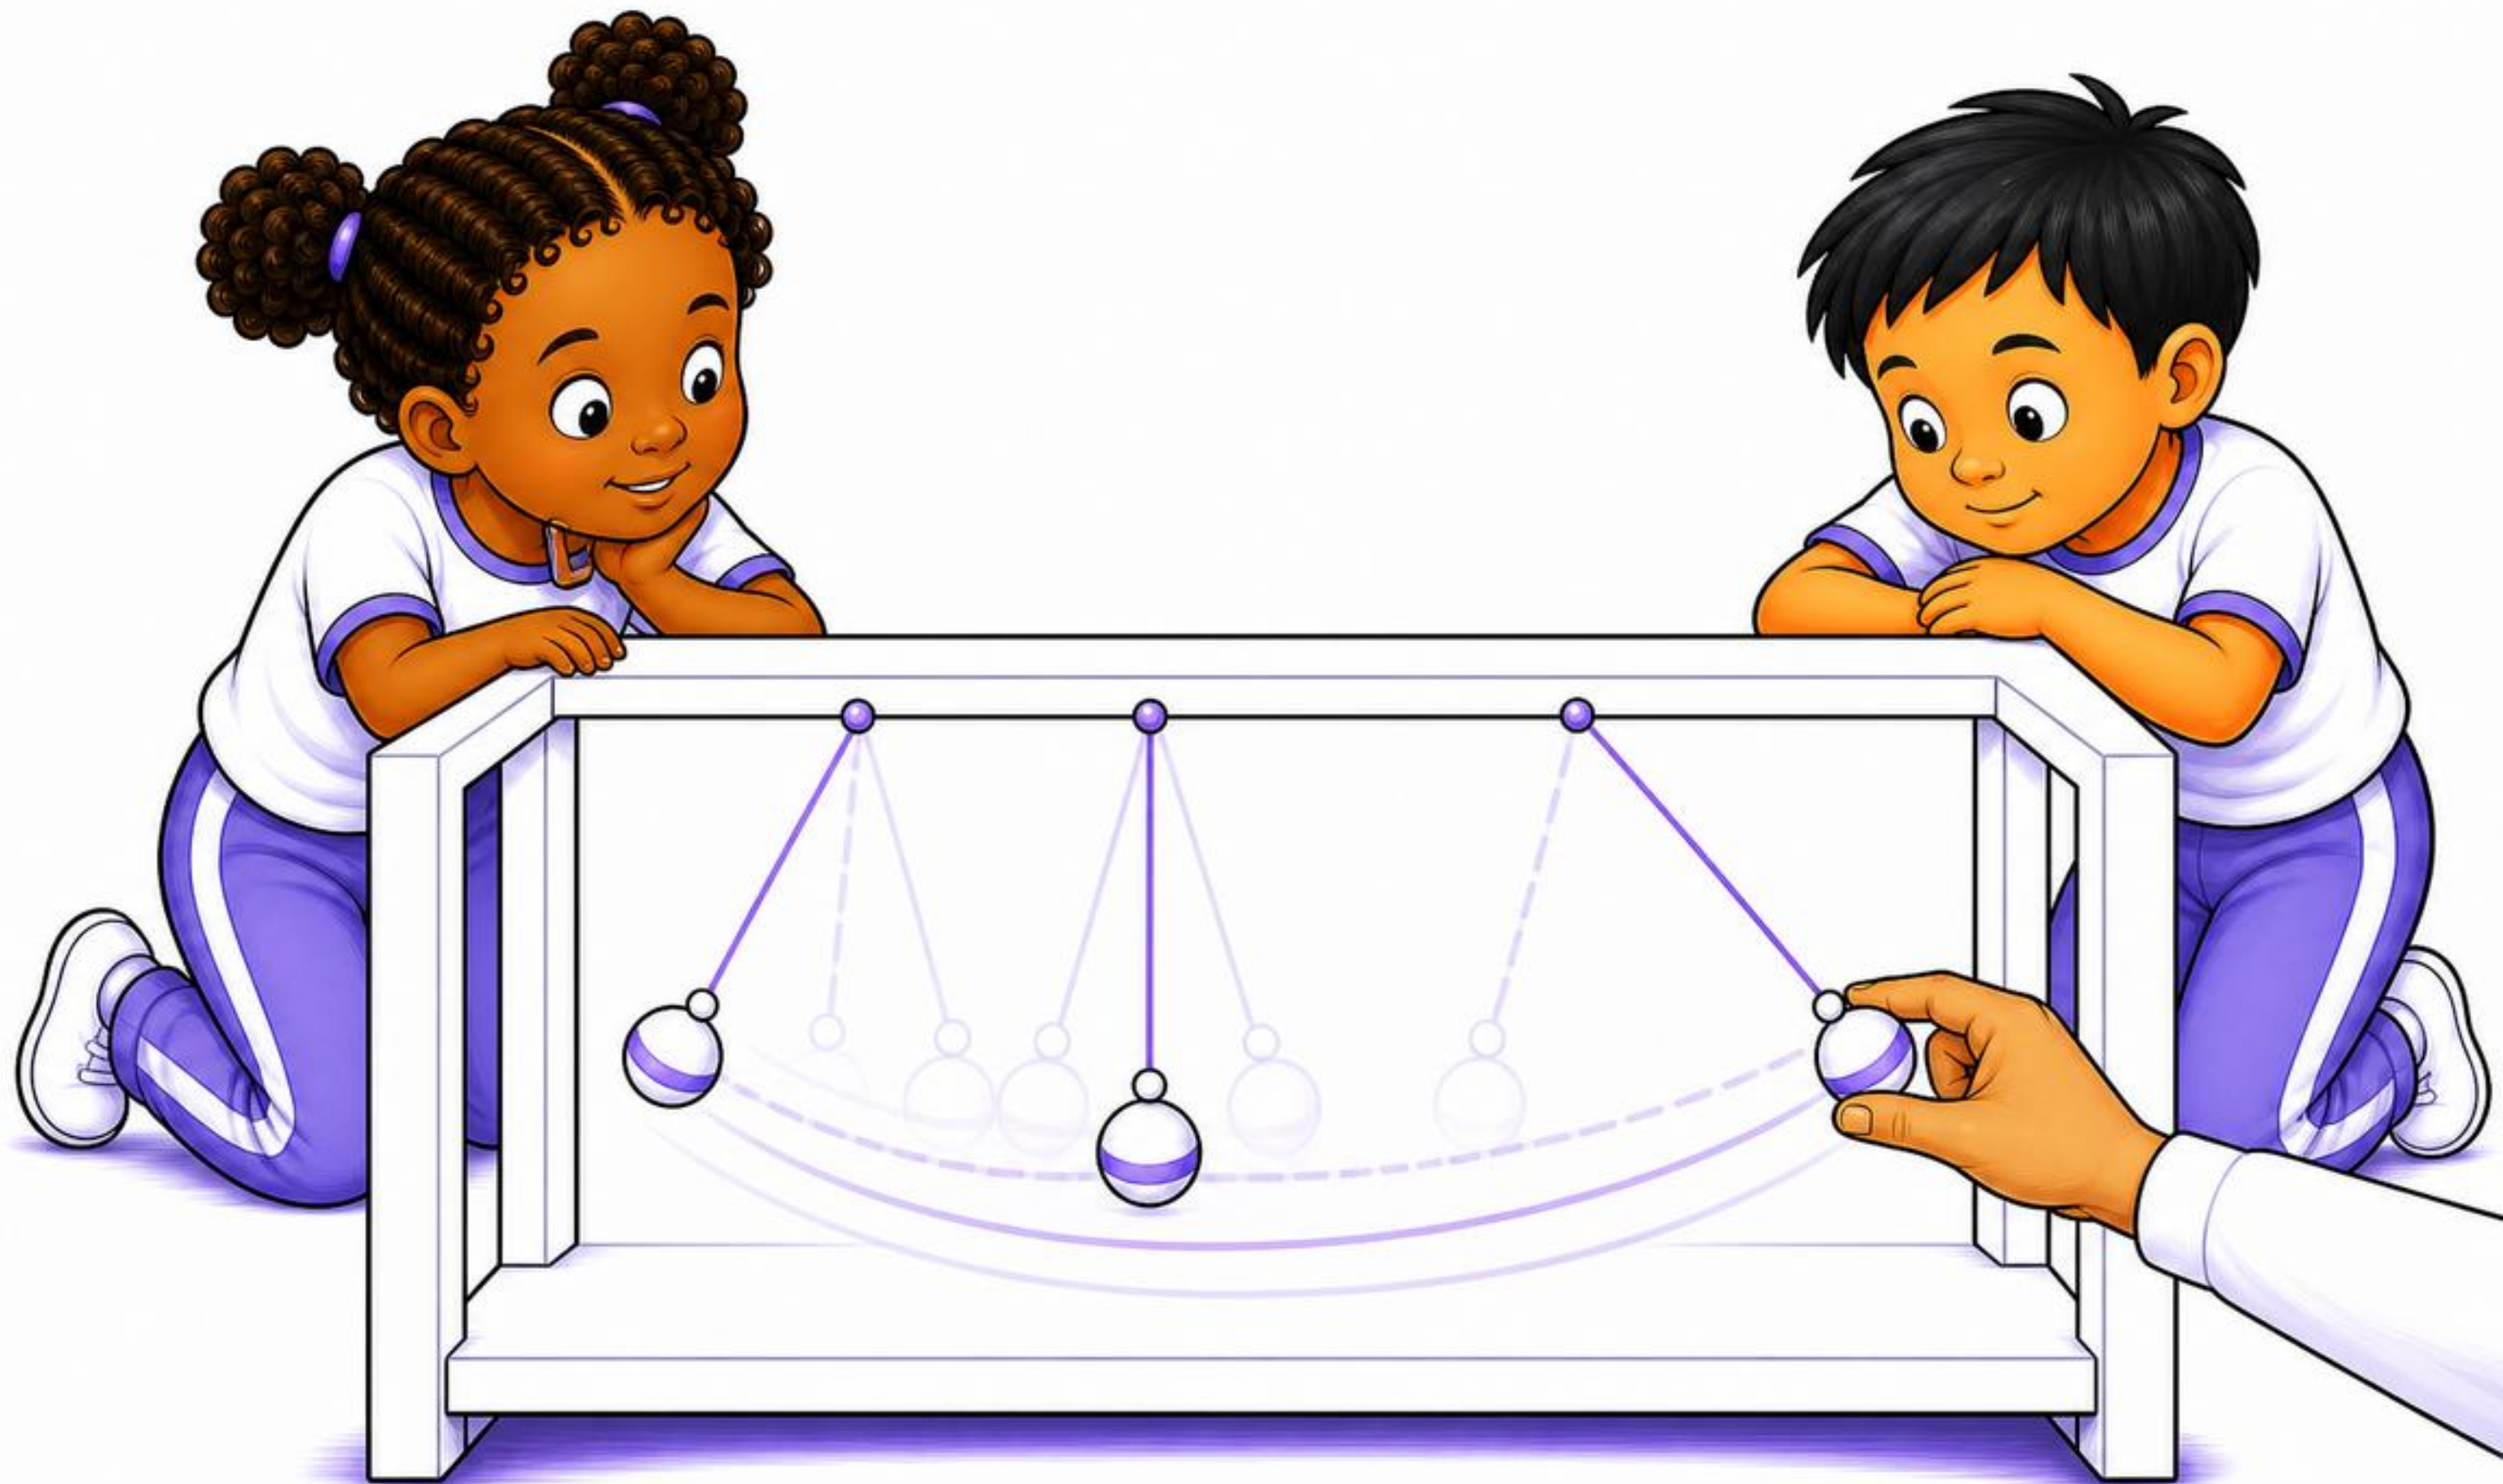

Three beads held.
Then four.
Then five.

The parts kept moving.
The relation held.
Nature can build with motion.

Move.
Fit.
Hold.

Move.
Fit.
Hold.
